

# Microsoft

## Exam Questions AB-731

AI Transformation Leader (beta)

**NEW QUESTION 1**

Your company plans to adopt AI across multiple business units. You need to ensure that all AI projects align with the company's business strategy and are implemented responsibly. What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. Allow each department to deploy its own AI tools and workflows.
- B. Delegate AI decision-making to the company's IT department.
- C. Outsource AI development to an external vendor.
- D. Establish an AI council to provide guidance, oversight, and coordination.

**Answer:** D

**NEW QUESTION 2**

You need to recommend a service that supports indexing information and knowledge mining by extracting insights from documents. What should you recommend?

- A. Microsoft Foundry
- B. Azure Vision in Foundry Tools
- C. Azure Document Intelligence in Foundry Tools
- D. Azure AI Search

**Answer:** D

**NEW QUESTION 3**

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

**Answer Area**

Statements	Yes	No
Microsoft Foundry helps organizations securely build and manage generative AI solutions in a governed environment.	<input type="radio"/>	<input type="radio"/>
Microsoft Foundry provides built-in scalability to enable organizations to expand AI workloads as usage increases.	<input type="radio"/>	<input type="radio"/>
Microsoft Foundry can be used for image recognition and computer vision tasks.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

**Answer Area**

Statements	Yes	No
Microsoft Foundry helps organizations securely build and manage generative AI solutions in a governed environment.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft Foundry provides built-in scalability to enable organizations to expand AI workloads as usage increases.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft Foundry can be used for image recognition and computer vision tasks.	<input checked="" type="radio"/>	<input type="radio"/>

**NEW QUESTION 4**

HOTSPOT

- Select the answer that correctly completes the sentence.

To ensure that your organization follows trustworthy AI principles, the organization should establish an AI governance council to .

**Answer Area**

To ensure that your organization follows trustworthy AI principles, the organization should establish an AI governance council to

configure and deploy AI models in the organization's Azure environment.

guide AI strategy, ensure responsible AI oversight, and promote alignment across business units.

manage day-to-day model training and labeling tasks for AI development teams.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Answer Area

To ensure that your organization follows trustworthy AI principles, the organization should establish an AI governance council to

configure and deploy AI models in the organization's Azure environment.

guide AI strategy, ensure responsible AI oversight, and promote alignment across business units.

manage day-to-day model training and labeling tasks for AI development teams.

**NEW QUESTION 5**

You have a historical dataset that contains 1,000 records. You need an AI solution that can analyze the data to identify patterns and predict future outcomes. What should you include in the solution?

- A. Microsoft Foundry
- B. Azure Document Intelligence in Foundry Tools
- C. Azure Machine Learning
- D. Azure Content Understanding in Foundry Tools

**Answer:** C

**NEW QUESTION 6**

You plan to meet with stakeholders to discuss how generative AI can benefit your company. You need to provide a relevant description of generative AI. Which description should you use?

- A. Generative AI is designed to generate responses based on a user's natural language prompts.
- B. Generative AI is designed to translate documents into other languages.
- C. Generative AI is designed to predict future trends based on historical data.
- D. Generative AI is designed to recommend products based on user behavior.

**Answer:** A

**NEW QUESTION 7**

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
Microsoft Foundry provides a unified platform for developers and data professionals to create custom end-to-end AI solutions.	<input type="radio"/>	<input type="radio"/>
Microsoft Foundry provides a unified platform for low-code developers and business users to create custom end-to-end AI solutions.	<input type="radio"/>	<input type="radio"/>
You need a Microsoft 365 Copilot license to access Microsoft Foundry services.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Answer Area

Statements	Yes	No
Microsoft Foundry provides a unified platform for developers and data professionals to create custom end-to-end AI solutions.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft Foundry provides a unified platform for low-code developers and business users to create custom end-to-end AI solutions.	<input type="radio"/>	<input checked="" type="radio"/>
You need a Microsoft 365 Copilot license to access Microsoft Foundry services.	<input type="radio"/>	<input checked="" type="radio"/>

**NEW QUESTION 8**

You plan to meet with a group of stakeholders to discuss how generative AI can benefit your company. You need to provide the stakeholders with a relevant description of generative AI during the meeting. Which description should you use?

- A. Generative AI is designed to translate documents into other languages.
- B. Generative AI is designed to predict future trends based on historical data.
- C. Generative AI is designed to generate responses based on a user's natural language prompts.
- D. Generative AI is designed to recommend products based on user behavior.

**Answer: C**

**Explanation:**

Generative AI's defining characteristic is that it creates new content (text, images, code, summaries, drafts) in response to instructions—most commonly natural language prompts. Option C captures that general-purpose description in a stakeholder-friendly way: users provide prompts and the system generates responses or content. This framing is broad enough to cover common business value scenarios such as summarizing documents, drafting communications, creating marketing copy, generating reports, building assistants, and producing structured outputs from unstructured requests.

Option A is a single use case (translation), not the defining description. Option B describes predictive analytics/forecasting, which is a different AI category focused on outcomes and probabilities rather than content creation. Option D describes recommendation systems, typically driven by ranking/behavioral signals; while AI can enhance recommendations, that is not the core definition of generative AI. Therefore, the most accurate and relevant description for stakeholders is C.

**NEW QUESTION 9**

DRAG DROP

DRAG DROP - Match the Microsoft responsible AI principles to the appropriate descriptions. NOTE: Each correct match is worth one point.

**AI principles**

- Fairness
- Reliability and safety
- Privacy and security
- Inclusiveness
- Transparency
- Accountability

**Answer Area**

- AI Principle: Protect personal information and apply strong safeguards to keep data secure.
- AI Principle: Make AI solutions understandable by explaining how and why decisions are made.
- AI Principle: Design AI solutions that are accessible to people of all abilities and experiences.
- AI Principle: Involve human oversight in the control of AI solutions.

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

**AI principles**

- Fairness
- Reliability and safety
- Privacy and security
- Inclusiveness
- Transparency
- Accountability

**Answer Area**

- Privacy and security: Protect personal information and apply strong safeguards to keep data secure.
- Transparency: Make AI solutions understandable by explaining how and why decisions are made.
- Inclusiveness: Design AI solutions that are accessible to people of all abilities and experiences.
- Accountability: Involve human oversight in the control of AI solutions.

**NEW QUESTION 10**

HOTSPOT

- For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

**Answer Area**

Statements	Yes	No
Azure Vision in Foundry Tools can extract and analyze key phrases from PDF files.	<input type="radio"/>	<input type="radio"/>
Azure Vision in Foundry Tools can generate images based on natural language descriptions.	<input type="radio"/>	<input type="radio"/>
Azure Document Intelligence in Foundry Tools can be used to automate the processing of invoices and credit notes.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Answer Area

Azure Vision in Foundry Tools can extract and analyze key phrases from PDF files. Answer: No

Azure Vision in Foundry Tools can generate images based on natural language descriptions. Answer: No

Azure Document Intelligence in Foundry Tools can be used to automate the processing of invoices and credit notes. Answer: Yes

No— Azure Vision in Foundry Tools focuses on computer vision tasks such as image analysis and OCR (reading text from images and documents). While it can extract text from scanned PDFs via OCR, key phrase extraction is a natural language processing capability provided by Azure Language in Foundry Tools, not Azure Vision. Key phrase extraction analyzes text to identify main concepts, which is a different service family than vision.

No— Azure Vision can analyze existing images (for example, generate captions/descriptions of an image), but generating new images from a text prompt is a generative model capability (for example, DALL-E through Azure OpenAI/Azure AI Foundry model endpoints), not an Azure Vision feature. Vision describes what it sees; it doesn't synthesize new images from natural language.

Yes— Azure Document Intelligence in Foundry Tools is designed for intelligent document processing, including automating extraction of structured fields from financial documents. Microsoft provides prebuilt models for invoices and supports custom extraction for similar document types, which makes it suitable for automating workflows involving invoices and credit-note style documents (field extraction, validation, routing).

**NEW QUESTION 10**

Your company plans to implement a proof of concept PoC agent that uses Azure OpenAI. The solution must start small and provide flexibility to scale usage as demand grows. Which pricing model should you use?

- A. Microsoft 365 Copilot
- B. Batch API
- C. Provisioned PTUs
- D. Standard On-Demand

**Answer:** D

**Explanation:**

For a proof of concept, the key requirements are low commitment, quick start, and the ability to scale up or down as you learn what real usage looks like. Azure OpenAI Standard On-Demand pricing is designed for exactly that: you pay per token consumed (input and output) on a pay-as-you-go basis, which makes it ideal when demand is uncertain or variable—typical in early pilots and PoCs.

By contrast, Provisioned (PTUs) is best when you have well-defined, predictable throughput and latency requirements—usually a more mature, production workload. PTUs involve reserving model processing capacity to achieve consistent performance and more predictable costs, which is usually premature for a PoC where actual traffic patterns are not yet known.

Batch API is optimized for asynchronous high-volume jobs with a target turnaround (for example, up to 24 hours) and discounted pricing. That's great for offline processing, but it does not match an interactive agent PoC that typically needs near-real-time responses and iterative testing.

Microsoft 365 Copilot is a separate SaaS licensing model and is not the Azure OpenAI pricing model for building your own agent solution.

**NEW QUESTION 11**

You have a business unit that uses an AI solution to process loan applications. You discover that the solution rejects the application of all applicants that are older than 60 years of age. Which Microsoft responsible AI principle is this violating?

- A. accountability
- B. transparency
- C. fairness
- D. reliability and safety

**Answer:** C

**NEW QUESTION 14**

HOTSPOT

Select the answer that correctly completes the sentence. Prompt engineering is the process of \_\_\_\_\_.

Answer Area

Prompt engineering is the process of

integrating AI-powered tools into business workflows.

identifying and fixing errors in AI-generated content.

designing, developing, and training generative AI models to produce contextually relevant content.

crafting clear instructions to guide generative AI solutions in generating context-appropriate content.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

crafting clear instructions to guide generative AI solutions in generating context-appropriate content.

Prompt engineering is fundamentally about how you communicate intent to a generative AI model so it produces outputs that meet business expectations. The best completion is "crafting clear instructions to guide generative AI solutions in generating context-appropriate content" because it captures the practical, day-to-day discipline: shaping the input (prompt) with the right task framing, constraints, context, and output format.

In real deployments, prompt engineering includes specifying the role and objective (for example, "act as a customer support agent"), providing the necessary context (product details, policy excerpts, audience), adding explicit requirements (tone, length, must/must-not statements), and defining structured output (JSON fields, bullet sections, headings). It can also include adding examples (few-shot prompting), clarifying what to do when information is missing, and instructing the model to cite only provided sources or to ask follow-up questions. These techniques reduce ambiguity, improve consistency, and lower the risk of hallucinations or

off-brand responses.

The other options are not accurate definitions. ??Integrating AI-powered tools into business workflows?? describes solution adoption/integration, not prompt engineering. ??Identifying and fixing errors in AI-generated content?? is review/editing or quality assurance. ??Designing, developing, and training generative AI models?? is model development/ML engineering. Prompt engineering operates without changing model weights; it??s about steering model behavior through well-constructed instructions and context.

**NEW QUESTION 17**

HOTSPOT

- For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

**Answer Area**

Statements	Yes	No
To use Microsoft 365 Copilot Chat, you must have a Microsoft 365 Copilot license.	<input type="radio"/>	<input type="radio"/>
Microsoft 365 Copilot Chat provides context-aware assistance in Microsoft 365 apps.	<input type="radio"/>	<input type="radio"/>
Microsoft 365 Copilot Chat can only access information in open files and read emails.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

**Answer Area**

Statements	Yes	No
To use Microsoft 365 Copilot Chat, you must have a Microsoft 365 Copilot license.	<input type="radio"/>	<input checked="" type="radio"/>
Microsoft 365 Copilot Chat provides context-aware assistance in Microsoft 365 apps.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft 365 Copilot Chat can only access information in open files and read emails.	<input type="radio"/>	<input checked="" type="radio"/>

**NEW QUESTION 18**

HOTSPOT

- Select the answer that correctly completes the sentence.

Adopting Microsoft responsible AI principles is important for your organization because the principles .

Adopting Microsoft responsible AI principles is important for your organization

because the principles

- ensure that AI models deliver consistent and equitable results.
- help organizations increase trust in fully autonomous AI systems.
- promote the ethical and accountable use of AI.
- standardize model development practices across AI teams.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Adopting Microsoft responsible AI principles is important for your organization

because the principles

- ensure that AI models deliver consistent and equitable results.
- help organizations increase trust in fully autonomous AI systems.
- promote the ethical and accountable use of AI.
- standardize model development practices across AI teams.

**NEW QUESTION 20**

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

**Answer Area**

Statements	Yes	No
Microsoft 365 Copilot connectors enable you to index data from multiple sources to make the data available in Copilot.	<input type="radio"/>	<input type="radio"/>
You can build a custom Microsoft 365 Copilot connector when the available connectors do <b>NOT</b> meet your data integration requirements.	<input type="radio"/>	<input type="radio"/>
To use Microsoft 365 Copilot connectors, you need a Microsoft Copilot Studio license.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

**Answer Area**

Statements	Yes	No
Microsoft 365 Copilot connectors enable you to index data from multiple sources to make the data available in Copilot.	<input checked="" type="radio"/>	<input type="radio"/>
You can build a custom Microsoft 365 Copilot connector when the available connectors do <b>NOT</b> meet your data integration requirements.	<input checked="" type="radio"/>	<input type="radio"/>
To use Microsoft 365 Copilot connectors, you need a Microsoft Copilot Studio license.	<input type="radio"/>	<input checked="" type="radio"/>

**NEW QUESTION 24**

HOTSPOT

- Select the answer that correctly completes the sentence. The primary goal of generative AI is \_\_\_\_\_ .

**Answer Area**

The primary goal of generative AI is

- to analyze trends and classify data sources.
- to create new content, such as text, images, or code.
- to make predictions based on historical data.

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

to create new content, such as text, images, or code.

Generative AI is defined by its ability to produce new outputs—content that did not previously exist in exactly that form—based on patterns learned from large datasets. That content can be text (emails, summaries, policies), images (design mockups, marketing visuals), code (snippets, scripts), audio, and more.

Therefore, the correct completion is ??to create new content, such as text, images, or code.??

The other options describe different AI categories. ??Analyze trends and classify data sources?? is primarily analytical/classification work, typically associated with traditional machine learning models (for example, clustering, categorization, fraud classification). ??Make predictions based on historical data?? is predictive AI (forecasting demand, predicting churn, estimating failure probability). While generative AI can assist those workflows by explaining results or drafting narratives, its primary purpose is not classification or forecasting—it is content synthesis.

In practical business value terms, this is why generative AI is commonly deployed for productivity tasks like drafting and rewriting content, summarizing long documents, generating customer communications, creating knowledge assistants, and producing structured outputs (tables, bullet lists, JSON) from unstructured prompts. The model??s differentiator is its ability to transform instructions and context into coherent, human-like content.

**NEW QUESTION 26**

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

**Answer Area**

Statements	Yes	No
Microsoft 365 Copilot helps users create and analyze content in Microsoft 365 apps.	<input type="radio"/>	<input type="radio"/>
Microsoft Copilot Studio can only be used to customize Microsoft 365 Copilot.	<input type="radio"/>	<input type="radio"/>
Microsoft Security Copilot uses AI to assign sensitivity labels to documents.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

**Answer Area**

Statements	Yes	No
Microsoft 365 Copilot helps users create and analyze content in Microsoft 365 apps.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft Copilot Studio can only be used to customize Microsoft 365 Copilot.	<input type="radio"/>	<input checked="" type="radio"/>
Microsoft Security Copilot uses AI to assign sensitivity labels to documents.	<input type="radio"/>	<input checked="" type="radio"/>

**NEW QUESTION 29**

HOTSPOT

- What should you use for each task? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Extracting structured data from forms and invoices:

▼

- Azure Language in Foundry Tools
- Azure Document Intelligence in Foundry Tools
- Azure Vision in Foundry Tools

Summarizing written content from business reports:

▼

- Azure Language in Foundry Tools
- Azure Document Intelligence in Foundry Tools
- Azure Vision in Foundry Tools

Generating descriptive text for uploaded images:

▼

- Azure Language in Foundry Tools
- Azure Document Intelligence in Foundry Tools
- Azure Vision in Foundry Tools

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Answer Area

Extracting structured data from forms and invoices: Answer: Azure Document Intelligence in Foundry Tools

Summarizing written content from business reports: Answer: Azure Language in Foundry Tools

Generating descriptive text for uploaded images: Answer: Azure Vision in Foundry Tools

These three tasks align to three different Azure AI capability families: document processing, language understanding/generation, and computer vision.

Forms and invoices are semi-structured documents where the business need is to extract specific fields (IDs, names, totals, dates) reliably into structured output. Azure Document Intelligence is designed for intelligent document processing and includes prebuilt models (such as invoices) as well as custom extraction options, making it the correct choice for structured data extraction from documents.

Summarizing written business reports is an NLP task focused on compressing long text into key points, themes, and action items. Azure Language provides language processing capabilities (including summarization features within language service capabilities), so it is the best fit for summarization scenarios.

Generating descriptive text for images (image captioning/description) is a computer vision task. Azure Vision can analyze uploaded images and return descriptions/captions and other visual insights, which directly matches the requirement to produce descriptive text from images.

**NEW QUESTION 31**

Your company plans to use generative AI to help build a website that will showcase various existing products. Which capability best describes a benefit of using generative AI for this project? Select the BEST answer.

- A. translating product descriptions into a different language
- B. analyzing product sales to identify patterns and trends
- C. designing a new product based on customer requirements
- D. creating product descriptions based on product specifications

**Answer:** D

**NEW QUESTION 34**

HOTSPOT

- Select the answer that correctly completes the sentence.

When you use Microsoft 365 Copilot connectors to connect external content to \_\_\_\_\_, your users can find, summarize, and learn from line-of-business (LOB) data by using natural language prompts.

Answer Area

When you use Microsoft 365 Copilot connectors to connect external content to

▼

- Azure AI Search
- Microsoft Graph
- Microsoft Purview
- Microsoft SharePoint

, your users can

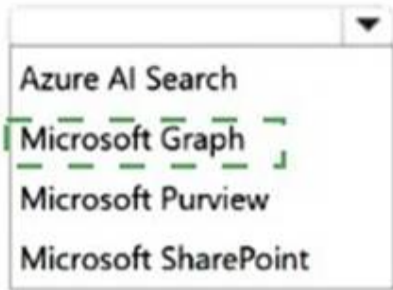

find, summarize, and learn from line-of-business (LOB) data by using natural language prompts.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

**Answer Area**

When you use Microsoft 365 Copilot connectors to connect external content to , your users can find, summarize, and learn from line-of-business (LOB) data by using natural language prompts.

**NEW QUESTION 39**

Which business requirement most closely relates to grounding a generative AI model?

- A. supporting multiple languages
- B. measuring the number of user interactions per day
- C. enabling users to interact by using natural language queries
- D. ensuring that verified company data sources are used for response generation

**Answer:** D

**NEW QUESTION 43**

Your company plans to use an AI-powered solution to analyze customer feedback for insights related to future product designs. You need to mitigate the privacy risks associated with the solution. What is the best approach to achieve the goal? Select the BEST answer.

- A. Anonymize the source data to remove customer Personally Identifiable Information (PII) from the feedback.
- B. Delete all the feedback data immediately after analysis.
- C. Ensure that feedback is attributable to the customer so that it can be deleted upon request.
- D. Limit privacy reviews to the final stage of the AI project lifecycle.

**Answer:** A

**NEW QUESTION 47**

**HOTSPOT**

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

**Answer Area**

Statements	Yes	No
Microsoft Copilot provides a single AI app that has identical features and experiences across all Microsoft products.	<input type="radio"/>	<input type="radio"/>
Microsoft 365 Copilot delivers AI capabilities for business users that use Microsoft 365 apps.	<input type="radio"/>	<input type="radio"/>
Microsoft Security Copilot helps companies understand risks and the organizational security posture.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

**Answer Area**

Statements	Yes	No
Microsoft Copilot provides a single AI app that has identical features and experiences across all Microsoft products.	<input type="radio"/>	<input checked="" type="radio"/>
Microsoft 365 Copilot delivers AI capabilities for business users that use Microsoft 365 apps.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft Security Copilot helps companies understand risks and the organizational security posture.	<input checked="" type="radio"/>	<input type="radio"/>

#### NEW QUESTION 51

Your company is evaluating the use of Microsoft Copilot Studio to support business process automation and employee self-service. Which two capabilities are directly supported in Copilot Studio? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

- A. Using agents to identify and respond to security incidents
- B. configuring document security
- C. drafting and summarizing files in Microsoft Word and PowerPoint
- D. building agents that connect to business data and automate user interactions
- E. customizing agent behavior and responses

**Answer:** DE

#### NEW QUESTION 55

You need to create a custom Azure Machine Learning model. The data used to train the model is consistent and uniform. What should you do first?

- A. Prepare the training data.
- B. Evaluate the model.
- C. Train the model.
- D. Tune hyperparameters.
- E. Deploy the model.

**Answer:** A

#### Explanation:

Even when training data is already consistent and uniform, the first step in building a custom Azure Machine Learning model is still to prepare the training data. Consistent data reduces the amount of cleaning you may need, but preparation is broader than cleaning: you still must confirm the schema, validate data types, handle missing values (if any), ensure label quality (for supervised learning), select/engineer features, and split data into training/validation/test sets. Those actions determine whether training will be stable and whether evaluation metrics will be meaningful.

If you skip preparation and go directly to training (C), the model might learn from the wrong columns, inconsistent labels, or poorly partitioned data, producing misleading results. Evaluation (B) comes after training because you need a trained model to score and measure. Hyperparameter tuning (D) is an optimization activity that presupposes you already have a working training pipeline and a baseline model to improve. Deployment (E) is last, after you have validated performance and selected the model candidate.

Azure Machine Learning commonly operationalizes these steps through pipelines, where data preparation is a foundational stage that precedes training and evaluation (and can also be iterated as you refine features and quality).

#### NEW QUESTION 57

Your company has a Microsoft 365 subscription and uses Microsoft 365 Copilot Chat. Some users need to build and use declarative agents that can access work data. Which type of license should you recommend for the users?

- A. a Microsoft 365 Copilot add-on license
- B. Microsoft Copilot Studio user license
- C. a Copilot Chat pay-as-you-go plan

**Answer:** A

#### NEW QUESTION 59

Which statement accurately describes the difference between a pretrained generative AI model and a fine-tuned generative AI model?

- A. A pretrained model requires labeled data, while a fine-tuned model does not.
- B. A pretrained model is faster to train than a fine-tuned model because the pretrained model uses fewer parameters.
- C. A pretrained model is trained on broad datasets, while a fine-tuned model is adapted to perform well on a narrower, domain-specific dataset.
- D. A pretrained model is optimized for a specific task, while a fine-tuned model is designed for general-purpose use.

**Answer:** C

#### Explanation:

A pretrained generative AI model is trained initially on a large, broad, and diverse dataset so it learns general language (or multimodal) patterns and capabilities. Fine-tuning then takes that pretrained base and performs additional training on a smaller, task- or domain-specific dataset to specialize behavior—improving performance for a particular use case, tone, style, or domain knowledge representation. That is exactly what option C states, making it the correct answer.

Option A is incorrect because both pretraining and fine-tuning may use labeled or unlabeled data depending on the technique; the distinction is not labeled vs. unlabeled. Option B is incorrect because a pretrained model is not faster to train due to fewer parameters; pretraining is typically the most compute-intensive phase precisely because it's done at large scale, while fine-tuning is smaller but still trains the same model architecture. Option D is reversed: the pretrained model is the general-purpose foundation, while the fine-tuned model is the specialized variant for a specific task or dataset.

#### NEW QUESTION 62

##### HOTSPOT

- For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

**Answer Area**

Statements	Yes	No
Microsoft Copilot in Outlook can automatically send follow-up replies to emails.	<input type="radio"/>	<input type="radio"/>
Microsoft Copilot in Outlook can identify and surface tasks mentioned in your emails.	<input type="radio"/>	<input type="radio"/>
Microsoft Copilot in Outlook can summarize long email threads and highlight action items and deadlines.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

**Answer Area**

Statements	Yes	No
Microsoft Copilot in Outlook can automatically send follow-up replies to emails.	<input type="radio"/>	<input checked="" type="radio"/>
Microsoft Copilot in Outlook can identify and surface tasks mentioned in your emails.	<input checked="" type="radio"/>	<input type="radio"/>
Microsoft Copilot in Outlook can summarize long email threads and highlight action items and deadlines.	<input checked="" type="radio"/>	<input type="radio"/>

**NEW QUESTION 64**

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

**Answer Area**

Statements	Yes	No
A text-to-image generator can be used to translate content into other languages.	<input type="radio"/>	<input type="radio"/>
A predictive analytics model can generate new marketing content for a company's online ads.	<input type="radio"/>	<input type="radio"/>
A generative AI chatbot can engage customers in personalized conversations and recommend products.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

**Answer Area**

Statements	Yes	No
A text-to-image generator can be used to translate content into other languages.	<input type="radio"/>	<input checked="" type="radio"/>
A predictive analytics model can generate new marketing content for a company's online ads.	<input type="radio"/>	<input checked="" type="radio"/>
A generative AI chatbot can engage customers in personalized conversations and recommend products.	<input checked="" type="radio"/>	<input type="radio"/>

**NEW QUESTION 67**

HOTSPOT

- For each of the following statements, select Yes if the statement is true. Otherwise, select No.

**Answer Area**

Statements	Yes	No
A generative AI model guarantees factually accurate responses if the model is trained on a large dataset.	<input type="radio"/>	<input type="radio"/>
Content filtering and responsible AI safeguards help a generative AI model generate safe and inoffensive content.	<input type="radio"/>	<input type="radio"/>
A generative AI model always produces fair and unbiased results when the training data has been properly prepared and reviewed for fairness.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

**Answer Area**

Statements	Yes	No
A generative AI model guarantees factually accurate responses if the model is trained on a large dataset.	<input type="radio"/>	<input checked="" type="radio"/>
Content filtering and responsible AI safeguards help a generative AI model generate safe and inoffensive content.	<input checked="" type="radio"/>	<input type="radio"/>
A generative AI model always produces fair and unbiased results when the training data has been properly prepared and reviewed for fairness.	<input type="radio"/>	<input checked="" type="radio"/>

**NEW QUESTION 69**

HOTSPOT

For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

**Answer Area**

Statements	Yes	No
Retrieval Augmented Generation (RAG) requires model fine-tuning.	<input type="radio"/>	<input type="radio"/>
Retrieval Augmented Generation (RAG) is helpful when you need a generative AI solution that can access current, verifiable information.	<input type="radio"/>	<input type="radio"/>
Retrieval Augmented Generation (RAG) enables you to get more relevant responses based on your organization's documents without retraining the base model.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

**Answer Area**

Statements	Yes	No
Retrieval Augmented Generation (RAG) requires model fine-tuning.	<input type="radio"/>	<input checked="" type="radio"/>
Retrieval Augmented Generation (RAG) is helpful when you need a generative AI solution that can access current, verifiable information.	<input checked="" type="radio"/>	<input type="radio"/>
Retrieval Augmented Generation (RAG) enables you to get more relevant responses based on your organization's documents without retraining the base model.	<input checked="" type="radio"/>	<input type="radio"/>

**NEW QUESTION 73**

Your company manages a website that publishes daily news articles. You need to recommend an AI solution that can analyze text and identify the main people, locations, and companies mentioned in the articles. What should you include in the recommendation?

- A. Azure Language in Foundry Tools
- B. Content Safety in Foundry Control Plane
- C. Azure Vision in Foundry Tools
- D. Azure Speech in Foundry Tools

**Answer:** A

**Explanation:**

The requirement is to analyze text and identify people, locations, and companies mentioned in news articles. This is a classic Named Entity Recognition (NER)/entity extraction scenario, which falls under natural language processing. Azure Language in Foundry Tools is the correct choice because it provides text analytics capabilities that detect and categorize entities in unstructured text—commonly including Person, Location, and Organization. This enables downstream experiences such as topic tagging, search filters (e.g., all articles mentioning Company X), trend dashboards (top people/places mentioned this week), and improved content discovery.

The other options do not match the requirement. Content Safety focuses on moderating harmful or policy-violating content (for example, hate, violence, self-harm, sexual content) and is not the primary tool for extracting named entities. Azure Vision is for analyzing images and performing OCR; it would only be relevant if the articles were images or scans, but the task here is entity extraction from text articles. Azure Speech is for speech-to-text, text-to-speech, and audio analysis; it would be used if your input were audio recordings rather than written articles.

Therefore, to identify key entities (people, locations, companies) from daily news article text, the best recommendation is Azure Language in Foundry Tools.

**NEW QUESTION 75**

Your company is building a portfolio of AI-powered business solutions. Company executives want to understand how Microsoft responsible AI principles can support the company's long-term goals. Which benefit best demonstrates the importance of responsible AI? Select the BEST answer.

- A. guarantees that AI models provide accurate and relevant responses
- B. reduces the need for data protection policies and governance
- C. enhances stakeholder trust and fosters sustainable AI adoption throughout the organization
- D. reduces the need for executive oversight in AI decision-making

**Answer:** C

**NEW QUESTION 79**

Your company has an AI solution that uses a prebuilt Azure OpenAI model to generate content. You need to reduce the cost of the solution while minimizing the impact on the quality of the generated output. Which two actions should you perform? (Select TWO.) NOTE: Each correct selection is worth one point.

- A. Fine-tune the existing model.
- B. Apply content moderation.
- C. Optimize the prompts.
- D. Switch to an alternate model.
- E. Decrease the number of hosting hours for the model.

**Answer:** CD
