NEW QUESTION 2

HOTSPOT

Select the answer that correctly completes the sentence.

Conditional Access policies

- are configured by using the Microsoft Defender portal.
- are applied only to on-premises resources.
- provide control over how users can access cloud apps.
- require a Microsoft Exchange mailbox.

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:

Conditional Access policies

- are configured by using the Microsoft Defender portal.
- are applied only to on-premises resources.
- provide control over how users can access cloud apps.
- require a Microsoft Exchange mailbox.

NEW QUESTION 3

Your company requires that all Microsoft SharePoint sites have a minimum of two owners. You need to ensure that sites that have less than two owners are marked as read-only if the sites are NOT remediated. What should you configure in the SharePoint admin center?

- A. Site-level access restriction
- B. Data access governance reports
- C. Site lifecycle management
- D. Block download policy for SharePoint and OneDrive

Answer: C

#### NEW QUESTION 4

You plan to create an agent in the Microsoft 365 Copilot app to solve a business issue. What are two reasons to create the agent? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

- A. You need to group related chats into a Copilot notebook.
- B. You need to use a custom AI model.
- C. You need to use a custom set of instructions that differ from those of the chat experience.
- D. You need to reason over a specific website.

Answer: CD

#### NEW QUESTION 5

You need to create a Microsoft 365 Copilot agent that can create charts and visualizations based on a Microsoft Excel workbook. What should you configure for the agent?

- A. the Scrum Assistant template
- B. the Customer Insights Assistant template
- C. the code interpreter capability
- D. the image generator capability

Answer: C

#### Explanation:

The correct answer is C. the code interpreter capability. Microsoft Learn states that the code interpreter capability for Microsoft 365 Copilot declarative agents allows the agent to generate and execute Python code to analyze data and generate visualizations. Microsoft's agent schema documentation explicitly describes Code Interpreter as a capability used to solve complex math problems, analyze data, and generate visualizations. That directly matches the requirement to create charts and visualizations from a Microsoft Excel workbook.

Microsoft documentation also explains that code interpreter supports working with Excel files and is used for scenarios such as data analysis, statistical computations, and generating charts. This makes it the correct configuration for an agent that must reason over workbook data and produce chart-based outputs. By contrast, the image generator capability is for creating images, not for analyzing workbook data. The Scrum Assistant and Customer Insights Assistant options are templates, not the specific technical capability required to read data and build charts from an Excel workbook.

**NEW QUESTION 9**

Your organization has a Microsoft 365 E5 subscription.  
 You need to prevent users from sharing corporate financial data to external users. What should you use?

- A. retention labels
- B. data loss prevention (DLP) policies
- C. rote groups
- D. insider risk management policies

**Answer: B**

**NEW QUESTION 10**

Your organization has a Microsoft 365 subscription. All users are assigned a Microsoft 365 Copilot license.

You need to prevent the users from generating images by using Copilot. What should you use?

- A. the Microsoft Defender portal
- B. the Microsoft Purview portal
- C. the Microsoft 365 admin center
- D. the Microsoft Entra admin center

**Answer: C**

**Explanation:**

The correct answer is C. the Microsoft 365 admin center. Microsoft Learn documents a specific Copilot image generation setting in the Microsoft 365 admin center under Copilot > Settings > Copilot actions > Copilot image generation. Microsoft states that when this scenario is allowed, users can ask Copilot to create, design, and edit images. When it is not allowed, Copilot does not generate images and instead responds with stock or brand images. This directly matches the requirement to prevent users from generating images by using Copilot.

The other options are incorrect because Microsoft does not document this control as being managed from Defender, Purview, or Entra for this scenario. Microsoft also separately notes that organizations can control access to Designer image generation through policy, but the admin experience for managing the Microsoft 365 Copilot scenario itself is explicitly surfaced in the Microsoft 365 admin center. Therefore, for an exam question focused on where an admin should go to disable image generation in Copilot, the best and documented answer is the Microsoft 365 admin center.

**NEW QUESTION 10**

What can you use to block a user account automatically when a risky sign-in is detected?

- A. Microsoft Entra ID Protection
- B. Microsoft Defender for Office 365

**NEW QUESTION 40**

Your organization has a Microsoft 365 E5 subscription.

You need to ensure that a third-party cloud service can authenticate to Microsoft Entra. What should you configure?

- A. a Microsoft 365 Copilot connector
- B. multifactor authentication (MFA)
- C. a Conditional Access policy
- D. an app registration

Answer: D

**NEW QUESTION 45**

Your organization has a Microsoft 365 E5 subscription. You create a Microsoft Purview sensitivity label named Label1. You need to ensure that users can apply Label1 to files in Microsoft 365. What should you use?

- A. an auto-labeling policy
- B. a trainable classifier
- C. a retention label policy
- D. a sensitivity label policy

Answer: D

Explanation:

The correct answer is D. a sensitivity label policy. In Microsoft Purview, creating a sensitivity label by itself does not make it available to users. Microsoft Learn states that after you create sensitivity labels, you must publish them by creating a label policy so that users and groups can see and apply those labels in Microsoft 365 apps and services. Publishing controls which labels are available and to whom they are shown. This is why a sensitivity label policy is required to ensure that users can apply Label1 to files.

The other options do not meet the requirement. Auto-labeling policies apply labels automatically when content matches conditions, but they are not the primary mechanism for simply making a label available for user selection. A trainable classifier is used to identify content categories, not to publish a label. A retention label policy publishes retention labels for records and lifecycle purposes, which is different from sensitivity labeling for classification and protection. Therefore, the correct Microsoft-documented method to let users apply Label1 to files is to publish it using a sensitivity label policy.

**NEW QUESTION 46**

Your organization has a Microsoft 365 subscription that contains a user named User1. User1 plans to leave your company in two weeks. You need to capture the activity of User1 to identify whether the user is exfiltrating data. Which Microsoft Purview solution should you use?
