NEW QUESTION 3

You plan to create an agent in the Microsoft 365 Copilot app to solve a business issue. What are two reasons to create the agent? Each correct answer presents a complete solution. NOTE: Each correct selection is worth one point.

- A. You need to group related chats into a Copilot notebook.
- B. You need to use a custom AI model.
- C. You need to use a custom set of instructions that differ from those of the chat experience.
- D. You need to reason over a specific website.

Answer: CD

NEW QUESTION 4

You need to create a Microsoft 365 Copilot agent that can create charts and visualizations based on a Microsoft Excel workbook. What should you configure for the agent?

- A. the Scrum Assistant template
- B. the Customer Insights Assistant template
- C. the code interpreter capability
- D. the image generator capability

Answer: C

Explanation:

The correct answer isC. the code interpreter capability. Microsoft Learn states that thecode interpretercapability for Microsoft 365 Copilot declarative agents allows the agent togenerate and execute Python codetoanalyze dataandgenerate visualizations. Microsoft??s agent schema documentation explicitly describes Code Interpreter as a capability used to solve complex math problems, analyze data, and generate visualizations. That directly matches the requirement to createcharts and visualizationsfrom aMicrosoft Excel workbook.

Microsoft documentation also explains that code interpreter supports working withExcel filesand is used for scenarios such asdata analysis,statistical computations, andgenerating charts. This makes it the correct configuration for an agent that must reason over workbook data and produce chart-based outputs. By contrast, theimage generator capabilityis for creating images, not for analyzing workbook data. TheScrum AssistantandCustomer Insights Assistantoptions are templates, not the specific technical capability required to read data and build charts from an Excel workbook.

NEW QUESTION 16

Your company has a written compliance policy that requires all emails be retained for seven years, and then permanently deleted. Which Microsoft Purview solution should you use?

- A. Information Protection
- B. Insider Risk Management
- C. Data Loss Prevention
- D. Data Lifecycle Management

Answer: D

Explanation:

The correct answer isD. Data Lifecycle Management. Microsoft Learn states that Microsoft Purview retention policies and retention labels, managed underData Lifecycle Management, support three core outcomes:retain-only,delete-only, andretain and then delete. The requirement in this question is exact: keep email forseven yearsand thenpermanently deleteit. That is a textbookretain and then deleteretention configuration, which Microsoft documents as part of Purview??s retention capabilities. Microsoft also recommends using Microsoft 365 retention policies and labels for retaining and deleting emails rather than relying on older Exchange-only approaches in most modern compliance scenarios. The other options do not meet the requirement.Information Protectionfocuses on labeling and protecting sensitive information.Insider Risk Managementis used to detect and investigate risky user behavior.Data Loss Preventionhelps prevent inappropriate sharing or exfiltration of sensitive data. None of those are designed to enforce a timed seven-year retention period followed by automatic permanent deletion. The Microsoft Purview solution explicitly built for that lifecycle requirement isData Lifecycle Management.

Answer Area

John can [answer choice].

View all the users in the Microsoft Entra tenant

view all the content in Microsoft SharePoint sites

read all the content in Microsoft Exchange mailboxes

perform eDiscovery of Microsoft 365 Copilot prompts

- A. Mastered
- B. Not Mastered

Answer: A

Explanation:
The correct answer isView all the users in the Microsoft Entra tenant. In the exhibit, John is assigned theGlobal Readerrole. Microsoft documents that theGlobal Readerrole is intended for users who need toview administrator features and settings in admin centerthat a Global Administrator can view, but without edit permissions. That makes it appropriate for read-only visibility into tenant-wide directory and admin information, including users in Microsoft Entra. The other answer choices are not supported by the Global Reader role. Microsoft distinguishes admin-center visibility from access tocontentin workloads such asSharePoint sitesandExchange mailboxes. Global Reader is a read-only administrative role, not a content access role for reading all documents or mailbox items. Likewise,performing eDiscovery of Microsoft 365 Copilot promptsrequires Purview eDiscovery permissions or role group membership, not merely the Global Reader role. Microsoft documents eDiscovery permissions separately in Purview role groups. Therefore, based on the assigned role shown, the valid completion is that John canview all the users in the Microsoft Entra tenant.
