

# Microsoft

## Exam Questions MS-100

Microsoft 365 Identity and Services

### NEW QUESTION 1

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@LODSe426243.onmicrosoft.com Microsoft 365 Password: 3&YWyjse-6-d

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10887751

You hire a new Microsoft 365 administrator named Nestor Wilke. Nestor Wilke will begin working for your organization in several days.

You need to ensure that Nestor Wilke is prevented from using his account until he begins working.

- A. Mastered
- B. Not Mastered

**Answer:** A

#### Explanation:

You need to sign-in status for the account to 'Blocked'. Blocking doesn't stop the account from receiving email and it doesn't delete any data.

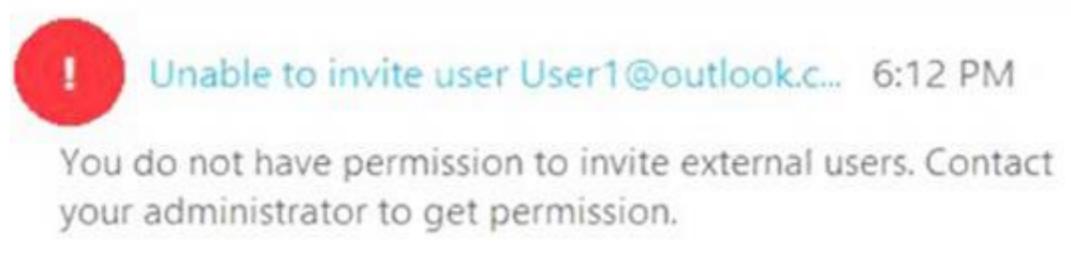

- \* 1. On the home page of the Microsoft 365 admin center, type the user's name into the Search box.
- \* 2. Select the Nestor Wilke account in the search results.
- \* 3. In the 'Sign-in status' section of the account properties, click the Edit link.
- \* 4. Select 'Block the user from signing in' and click the Save button.

### NEW QUESTION 2

- (Exam Topic 5)

You have a Microsoft Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com. An external user has a Microsoft account that uses an email address of user1@outlook.com.

An administrator named Admin1 attempts to create a user account for the external user and receives the error message shown in the following exhibit.

You need to ensure that Admin1 can add the user.

What should you do from the Azure Active Directory admin center?

- A. Add a custom domain name named outlook.com.
- B. Modify the Authentication methods.
- C. Modify the External collaboration settings.
- D. Assign Admin1 the Security administrator role.

**Answer:** C

#### Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/b2b/delegate-invitations>

### NEW QUESTION 3

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

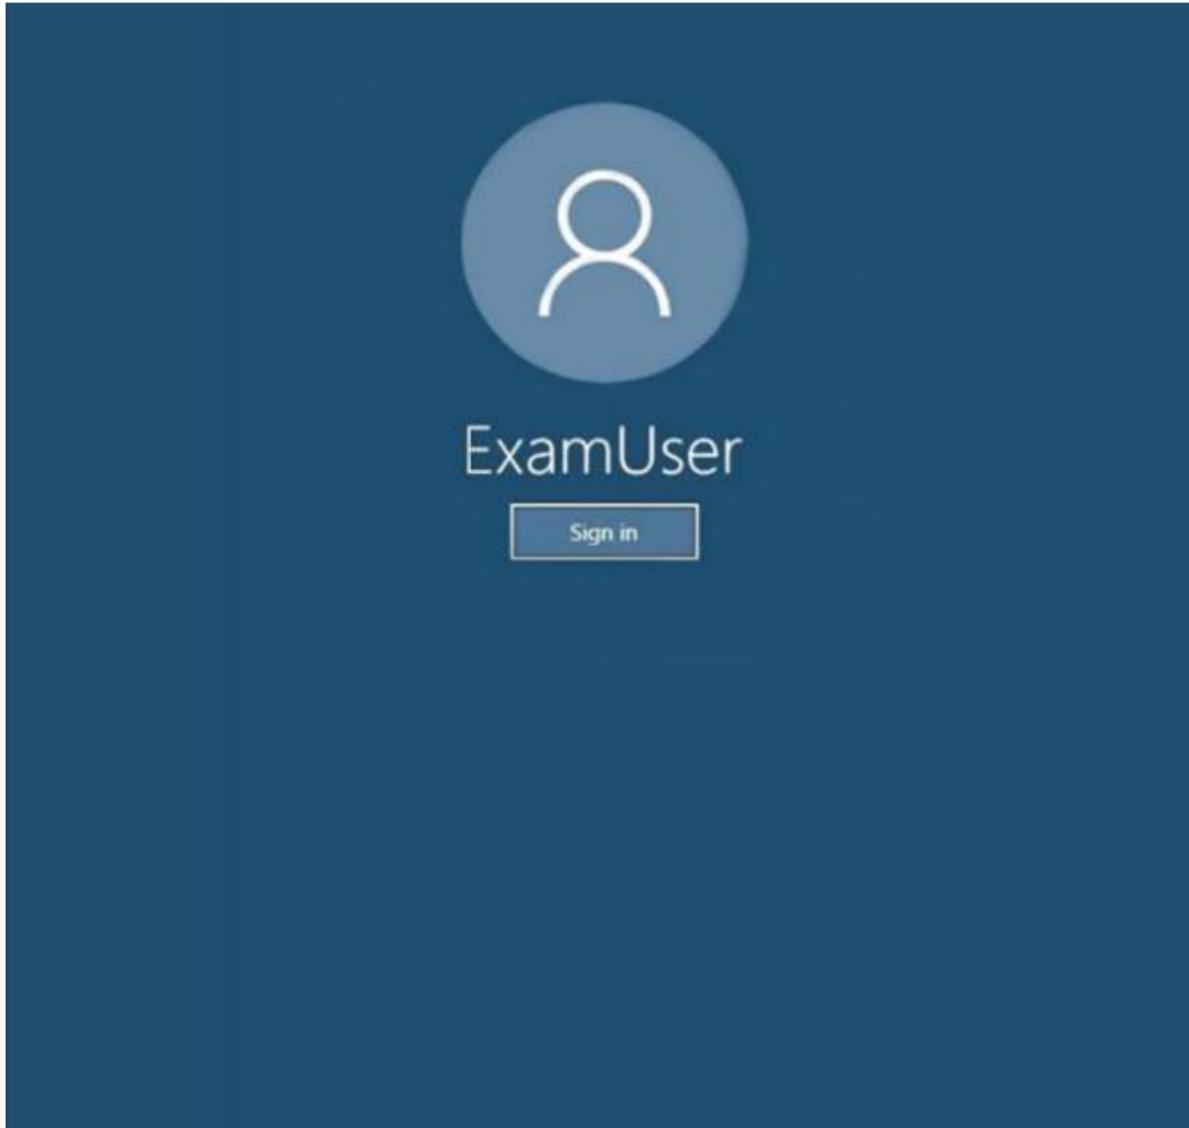

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.  
Microsoft 365 Username: admin@LODSe1211885.onmicrosoft.com Microsoft 365 Password: oL9z0=?Nq@ox  
If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.  
The following information is for technical support purposes only:  
Lab Instance: 11098651

You recently discovered that several users in your organization have permissions on the mailbox of another user in the organization. You need to ensure that Lee Gu receives a notification when a user is granted permissions on another user's mailbox. To answer the question, sign in to the Microsoft 365 portal.

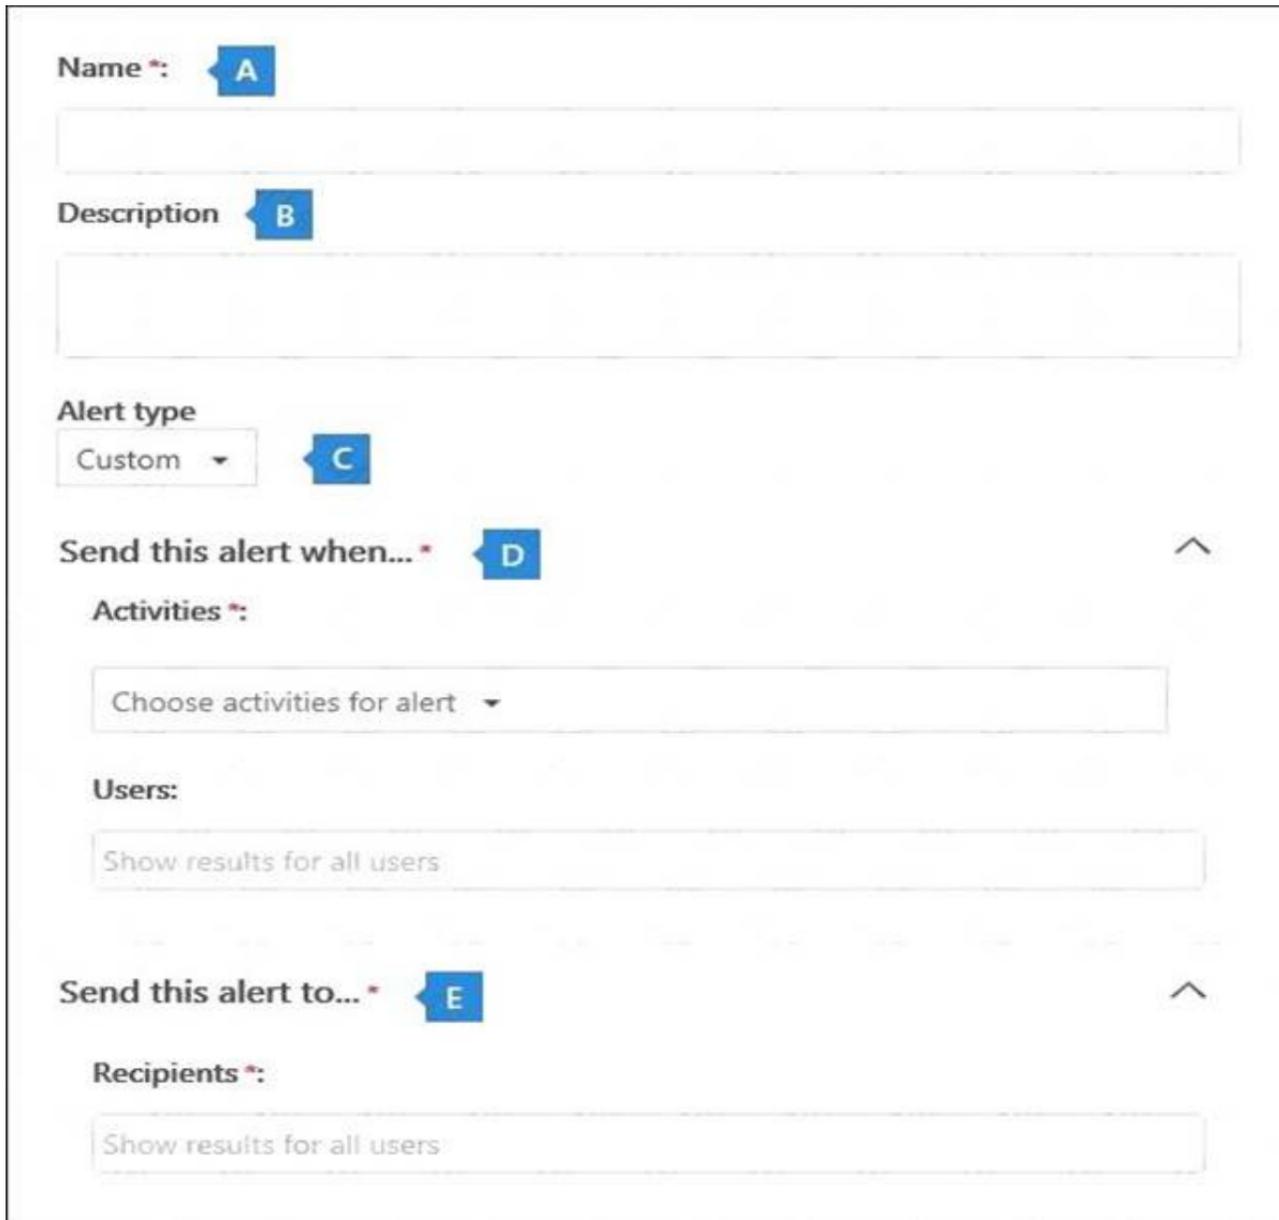

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Create an activity alert

- \* 1. Go to <https://protection.office.com/managealerts>.
- \* 2. Sign in to Office 365 using your work or school account.
- \* 3. On the Activity alerts page, click + New. The flyout page to create an activity alert is displayed.

\* 4. Complete the following fields to create an activity alert:

- > Name - Type a name for the alert. Alert names must be unique within your organization.
- > Description (Optional) - Describe the alert, such as the activities and users being tracked, and the users that email notifications are sent to. Descriptions provide a quick and easy way to describe the purpose of the alert to other admins.
- > Alert type - Make sure the Custom option is selected.
- > Send this alert when – Click Send this alert when and then configure these two fields:
  - Activities - Click the drop-down list to display the activities that you can create an alert for. This is the same activities list that's displayed when you search the Office 365 audit log. You can select one or more specific activities or you can click the activity group name to select all activities in the group. For a description of these activities, see the "Audited activities" section in Search the audit log. When a user performs any of the activities that you've added to the alert, an email notification is sent.
  - Users - Click this box and then select one or more users. If the users in this box perform the activities that you added to the Activities box, an alert will be sent. Leave the Users box blank to send an alert when any user in your organization performs the activities specified by the alert.
- > Send this alert to – Click Send this alert, and then click in the Recipients box and type a name to add a users who will receive an email notification when a user (specified in the Users box) performs an activity (specified in the Activities box). Note that you are added to the list of recipients by default. You can remove your name from this list.

\* 5. Click Save to create the alert. The new alert is displayed in the list on the Activity alerts page.

Activity alerts			
Name	Recipients	Status ▲	Date modified
Executive mailbox alert	compliance@contoso.com	On	2016-06-08 14:42:02
SharePoint upload alert	admin@contoso.com	Off	2016-06-08 14:23:39
External sharing alert	admin@contoso.com	Off	2016-06-08 14:24:08

The status of the alert is set to On. Note that the recipients who will received an email notification when an alert is sent are also listed.

References:

<https://docs.microsoft.com/en-us/microsoft-365/compliance/create-activity-alerts?view=o365-worldwide>

**NEW QUESTION 4**

- (Exam Topic 5)

Your company has a Microsoft 365 subscription.

You need to identify all the users in the subscription who are licensed for Microsoft Office 365 through a group membership. The solution must include the name of the group used to assign the license.

What should you use?

- A. the Licenses blade in the Azure portal
- B. Reports in the Microsoft 365 admin center
- C. Active users in the Microsoft 365 admin center

D. Report in Security & Compliance

**Answer:** A

**Explanation:**

In the Azure AD Admin Center, select Azure Active Directory then select Licenses to open the Licenses blade. From there you need to click on the 'Managed your purchased licenses link'. Select a license you want to view, for example Office 365 E3. This will then display a list of all users with that license. In the 'Assignment Paths' column, it will say 'Direct' for a license that has been assigned directly to a user or 'Inherited (Group Name)' for a license that has been assigned through a group.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/licensing-groups-assign>

**NEW QUESTION 5**

- (Exam Topic 5)

You are developing an interactive invoicing application that will be used by end users. The application will have the following features:

- Save invoices generated by a user to the user's OneDrive for Business.
- Email daily automated reminders.

You need to identify which permissions to grant for the application features. The solution must use the principle of least privilege. Which permission type should you grant for each feature? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer Area**

Save invoices:

Administrator
Application
Delegated
Super User

Send automated reminders:

Administrator
Application
Delegated
Super User

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

**Answer Area**

Save invoices:

Administrator
Application
<input checked="" type="checkbox"/> Delegated
Super User

Send automated reminders:

Administrator
<input checked="" type="checkbox"/> Application
Delegated
Super User

**NEW QUESTION 6**

- (Exam Topic 5)

Your company has 20 employees. Each employee has a mailbox hosted in Outlook.com. The company purchases a Microsoft 365 subscription.

You plan to migrate all the mailboxes to Microsoft 365.

You need to recommend which type of migration to use for the mailboxes. What should you recommend?

- A. Cutover migration
- B. Staged migration
- C. IMAP migration
- D. Minimal hybrid migration

**Answer:** C

**Explanation:**

To migrate mailboxes from Outlook.com to Office 365, you need to use the IMAP migration method.

After you've added your users to Office 365, you can use Internet Message Access Protocol (IMAP) to migrate email for those users from their IMAP-enabled email servers.

In the Microsoft 365 admin center, go to Setup

>Data migration

to start migrating IMAP enabled emails.

The email migrations page is pre-configured for migrations from Gmail, Outlook, Hotmail and Yahoo. You can also enter your own IMAP server name and connection parameters to migrate from an email service that is not listed.

References:

<https://docs.microsoft.com/en-us/exchange/mailbox-migration/migrating-imap-mailboxes/imap-migration-in-the>

#### NEW QUESTION 7

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result these questions will not appear in the review screen.

Your company has a main office and three branch offices. All the branch offices connect to the main office by using a WAN link. The main office has a high-speed Internet connection. All the branch offices connect to the Internet by using the main office connection.

Users use Microsoft Outlook 2016 to connect to 4 Microsoft Exchange Server mailbox hosted in the main office.

The users report that when the WAN link in their office becomes unavailable, they cannot access their mailbox.

You create a Microsoft 365 subscription, and then migrate all the user data to Microsoft 365.

You need to ensure that all the users can continue to use Outlook to receive email messages if a WAN link fails.

Solution: You deploy a site-to-site VPN from each branch office to Microsoft Azure. Does this meet the goal?

A. Yes

B. NO

**Answer: B**

#### NEW QUESTION 8

- (Exam Topic 5)

Your company has 10,000 users who access all applications from an on-premises data center. You plan to create a Microsoft 365 subscription and to migrate data to the cloud.

You plan to implement directory synchronization.

User account and group accounts must sync to Microsoft Azure Directory (Azure AD) successfully. You discover that several user accounts fail to sync to Azure AD.

You need to identify which user accounts failed to sync. You must resolve the issue as quickly as possible. What should you do?

A. From Active Directory Administrative Center, search for all the users, and then modify the properties of the user accounts.

B. Run idfix.exe, and then click Complete.

C. From Windows PowerShell, run the Start-AdSyncSyncCycle -PolicyType Delta command.

D. Run idfix.exe, and then click Edit.

**Answer: D**

#### Explanation:

IdFix is used to perform discovery and remediation of identity objects and their attributes in an on-premises Active Directory environment in preparation for migration to Azure Active Directory. IdFix is intended for the Active Directory administrators responsible for directory synchronization with Azure Active Directory.

Reference:

<https://docs.microsoft.com/en-us/office365/enterprise/prepare-directory-attributes-for-synch-with-idfix> <https://www.microsoft.com/en-gb/download/details.aspx?id=36832>

#### NEW QUESTION 9

- (Exam Topic 5)

Your company uses on-premises Windows Server File Classification Infrastructure (FCI). Some documents on the on-premises file servers are classified as Confidential.

You migrate the files from the on-premises file servers to Microsoft SharePoint Online.

You need to ensure that you can implement data loss prevention (DLP) policies for the uploaded files based on the Confidential classification.

What should you do first?

A. From the SharePoint admin center, create a managed property.

B. From the SharePoint admin center, configure hybrid search.

C. From the Security & Compliance Center PowerShell, run the New-DlpComplianceRule cmdlet.

D. From the Security & Compliance Center PowerShell, run the New-DataClassification cmdlet.

**Answer: A**

#### Explanation:

Your organization might use Windows Server FCI to identify documents with personally identifiable information (PII) such as social security numbers, and then classify the document by setting the Personally Identifiable Information property to High, Moderate, Low, Public, or Not PII based on the type and number of occurrences of PII found in the document. In Office 365, you can create a DLP policy that identifies documents that have that property set to specific values, such as High and Medium, and then takes an action such as blocking access to those files.

Before you can use a Windows Server FCI property or other property in a DLP policy, you need to create a managed property in the SharePoint admin center.

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/compliance/protect-documents-that-have-fci-or-other-properties>

#### NEW QUESTION 10

- (Exam Topic 5)

You have a SharePoint Framework (SPFx) web part that displays the weather. Users can set the city within the web part. Which component is invoked to provide the users with the ability to configure the settings for the web part?

A. a custom control

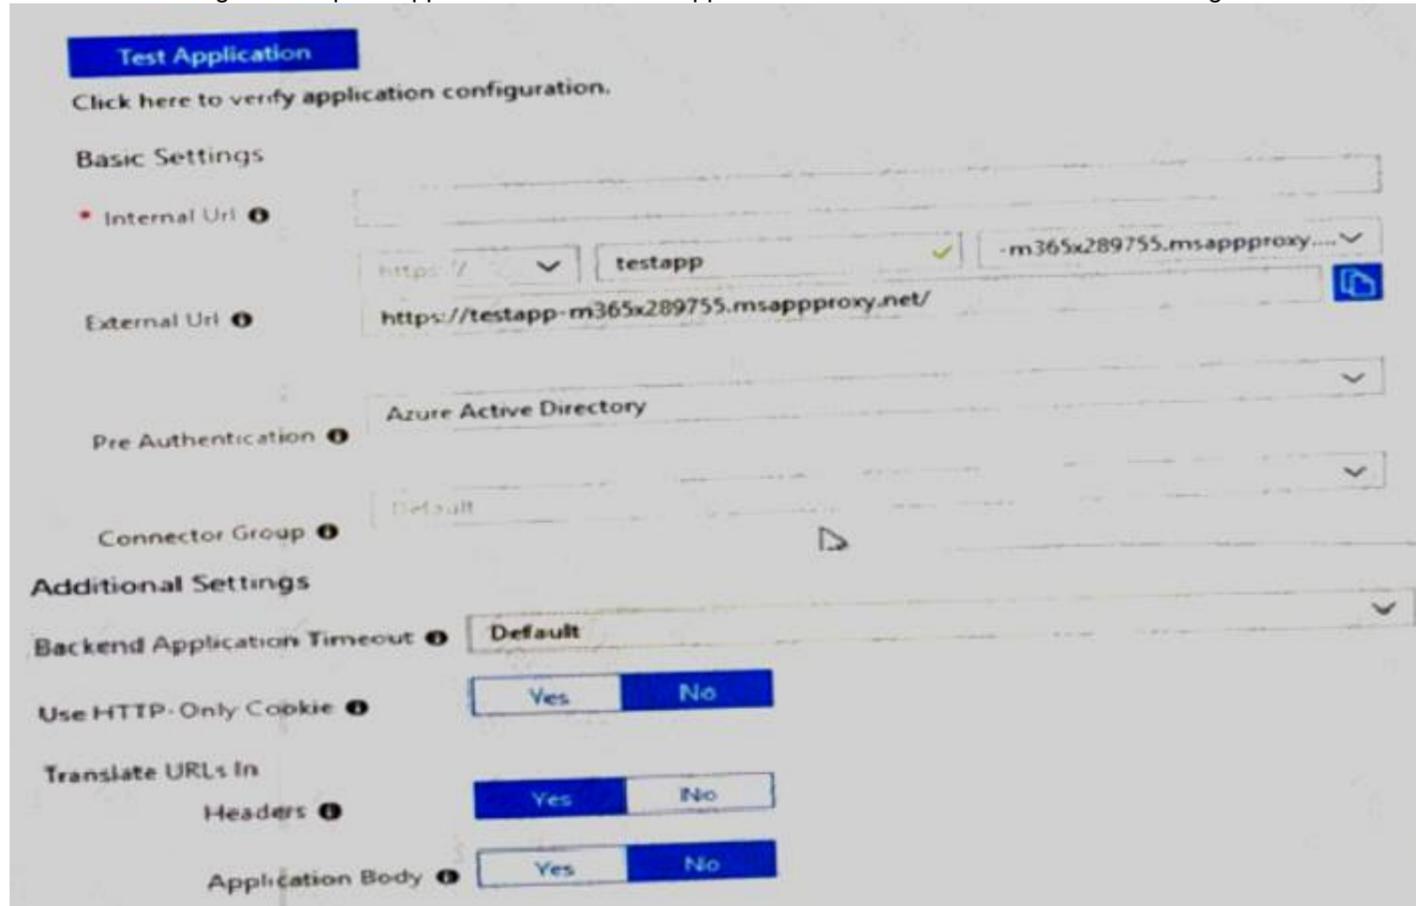

- B. the Application Customizer
- C. a library component
- D. the property pane

**Answer: D**

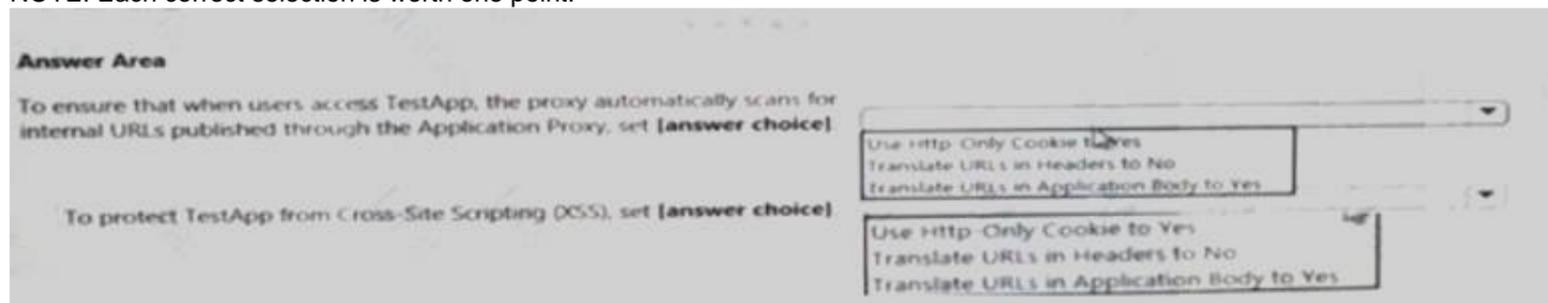

**NEW QUESTION 10**

- (Exam Topic 5)

You are confirming an enterprise application named Test App in Microsoft Azur as shown in the following exhibit.

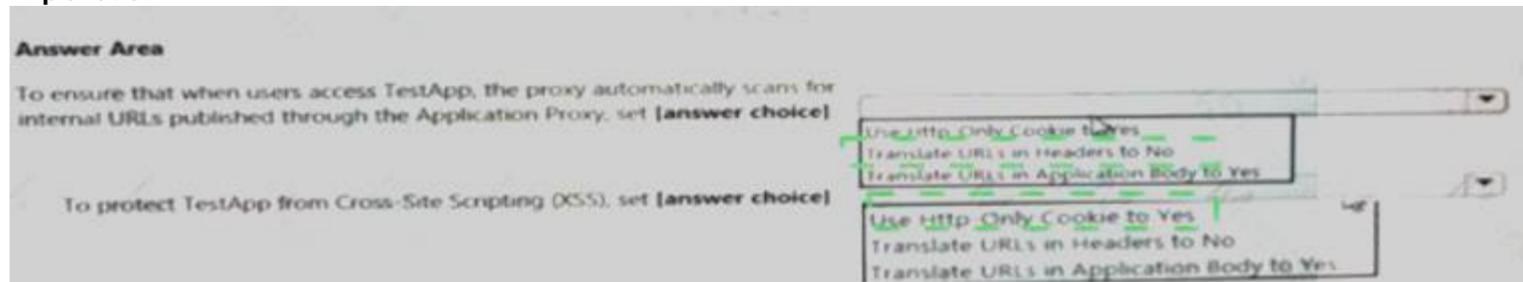

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.  
 NOTE: Each correct selection is worth one point.

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

**NEW QUESTION 14**

- (Exam Topic 5)

Your network contains an on-premises Active Directory domain named contoso.com. The domain contains 1,000 Windows 10 devices. You perform a proof of concept (PoC) deployment of Windows Defender Advanced Threat Protection (ATP) for 10 test devices. During the onboarding process, you configure Windows Defender ATP-related data to be stored in the United States. You plan to onboard all the devices to Windows Defender ATP data in Europe. What should you do first?

- A. Create a workspace
- B. Offboard the test devices
- C. Delete the workspace
- D. Onboard a new device

**Answer: B**

**Explanation:**

When onboarding Windows Defender ATP for the first time, you can choose to store your data in Microsoft Azure datacenters in the European Union, the United Kingdom, or the United States. Once configured, you cannot change the location where your data is stored.

The only way to change the location is to offboard the test devices then onboard them again with the new location.

Reference:

<https://docs.microsoft.com/en-us/windows/security/threat-protection/microsoft-defender-atp/data-storage-privac>

**NEW QUESTION 17**

- (Exam Topic 5)

You have a Microsoft 365 tenant that contains the users shown in the following table.

Name	Email address
User1	User1@contoso.com
User2	User2@contoso.com
User3	User3@contoso.com

Microsoft Exchange Online has the mail flow rules shown in the following table

Name	Priority
Rule1	0
Rule2	1
Rule3	2

Rule1 has the following settings:

Answer Area

Statements	Yes	No
If User1 sends an email to User3, User3 receives the email.	<input type="radio"/>	<input type="radio"/>
If User1 sends an email, a disclaimer is added to the email.	<input type="radio"/>	<input type="radio"/>
If an email is sent to User2, two disclaimers are added to the email.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

Answer: A

**Explanation:**

Answer Area

Statements	Yes	No
If User1 sends an email to User3, User3 receives the email.	<input type="radio"/>	<input checked="" type="radio"/>
If User1 sends an email, a disclaimer is added to the email.	<input checked="" type="radio"/>	<input type="radio"/>
If an email is sent to User2, two disclaimers are added to the email.	<input checked="" type="radio"/>	<input type="radio"/>

**NEW QUESTION 20**

- (Exam Topic 5)

What should you add to a SharePoint Framework 5PFx) solution to ensure that the solution can be used as a Microsoft Teams tab?

- A. the TeamsTab value to the supportedHosts property in the manifest file
- B. a Teams manifest file to the config folder in the solution
- C. the TeamsTab value to the componentType property in the manifest file
- D. a webpart manifest file to the config folder in the solution

Answer: A

**NEW QUESTION 25**

- (Exam Topic 5)

Your company has a Microsoft 365 subscription and a Microsoft Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com.

An external vendor has a Microsoft account that has a username of user1@outlook.com. You plan to provide user1@outlook.com with access to several resources in the subscription.

You need to add the external user account to contoso.onmicrosoft.com. The solution must ensure that the external vendor can authenticate by using user1@outlook.com.

What should you do?

- A. From Azure Cloud Shell, run the New-AzureADUser cmdlet and specify –UserPrincipalName user1@outlook.com.
- B. From the Microsoft 365 admin center, add a contact, and then specify user1@outlook.com as the email address.
- C. From the Azure portal, add a new guest user, and then specify user1@outlook.com as the email address.
- D. From the Azure portal, add a custom domain name, and then create a new Azure AD user and use user1@outlook.com as the username.

**Answer: C**

**Explanation:**

You can invite guest users to the directory, to a group, or to an application. After you invite a user through any of these methods, the invited user's account is added to Azure Active Directory (Azure AD), with a user type of Guest. The guest user must then redeem their invitation to access resources. An invitation of a user does not expire.

The invitation will include a link to create a Microsoft account. The user can then authenticate using their Microsoft account. In this question, the external vendor already has a Microsoft account (user1@outlook.com) so he can authenticate using that.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/b2b/add-users-administrator>

**NEW QUESTION 26**

- (Exam Topic 5)

Your company has a Microsoft 365 subscription.

You plan to move several archived PST files to Microsoft Exchange Online mailboxes. You need to create an import job for the PST files.

Which three actions should you perform before you create the import job? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Create a Microsoft Azure Storage account.
- B. From Microsoft 365 Security & Compliance, retrieve the SAS key.
- C. Run azcopy.exe to copy the PST files to Microsoft Azure Storage
- D. Use Microsoft Azure Storage Explorer to copy the PST files to Azure Storage.
- E. Create a PST import mapping file.

**Answer: BCE**

**Explanation:**

The first step is to download and install the Azure AzCopy tool, which is the tool that you run in Step 2 to upload PST files to Office 365. You also copy the SAS URL for your organization. This URL is a combination of the network URL for the Azure Storage location in the Microsoft cloud for your organization and a Shared Access Signature (SAS) key. This key provides you with the necessary permissions to upload PST files to your Azure Storage location.

Now you're ready to use the AzCopy.exe tool to upload PST files to Office 365. This tool uploads and stores them in an Azure Storage location in the Microsoft cloud.

After the PST files have been uploaded to the Azure Storage location for your Office 365 organization, the next step is to create a comma-separated value (CSV) file that specifies which user mailboxes the PST files will be imported to. You'll submit this CSV file when you create a PST Import job.

Reference:

<https://docs.microsoft.com/en-us/office365/securitycompliance/use-network-upload-to-import-pst-files>

**NEW QUESTION 27**

- (Exam Topic 5)

You need to meet the application requirement for the Office 365 ProPlus applications. You create a XML file that contains the following settings.

```
<Add SourcePath="\\Server1\OfficeSoftware"
  OfficeClientEdition="32"
  Channel="Targeted"
  AllowCdnFallback="True">
  <Product ID="O365ProPlusRetail">
    <Language ID="MatchOS" Fallback="en-us" />
  </Product>
</Add>
```

Use the drop-down menus to select the choice that complete each statement based on the information presented in the graphic.

NOTE: Each correct selection is worth one point.

**Answer Area**

Office 365 ProPlus feature updates will be installed [answer choice].

To meet the technical requirement for Office 365 ProPlus, [answer choice].

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

Answer Area

Office 365 ProPlus feature updates will be installed **[answer choice]**.  
 automatically once a year  
 automatically twice a year  
 manually

To meet the technical requirement for Office 365 ProPlus, **[answer choice]**.  
 Change SourcePath to DownloadPath.  
 Set the value for Allowcdnfallback to False.  
 Add SCLCacheOverride=1 to the Product section.

**NEW QUESTION 32**

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

You need to ensure that when Lynne Robbins attempts to sign in to the Microsoft Office 365 portal, Lynne Robbins is prompted to authenticate by using multiple methods.

To answer, sign in to the Microsoft 365 portal.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

You need to enable Multi-Factor Authentication for Lynne Robbins.

- \* 1. Sign in to the Microsoft 365 Admin Center.
- \* 2. In the left navigation pane, expand the Users section and select Active Users.
- \* 3. Click the 'Multi-factor authentication' link.
- \* 4. Select Lynne Robbins.
- \* 5. In the right navigation pane, select the 'Enable' link to enable MFA for the account.
- \* 6. Confirm the setting by clicking the 'Enable multi-factor authentication' button.
- \* 7. Click the Close button to close the confirmation window.

**NEW QUESTION 37**

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided. The following information is for technical support purposes only:  
Lab Instance: 10887751  
Your organization has an office in Seattle.  
You plan to create 100 users who will work in the Seattle office. The city attribute for all the users will be Seattle.  
You need to create a group named Group1 that will automatically contain all the Seattle office users.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

You need to create a Dynamic group. User accounts with the city attribute set to 'Seattle' will automatically be added to the group.

- \* 1. Go to the Azure Active Directory admin center.
- \* 2. Select Azure Active Directory then select Groups.
- \* 3. Click on the New Group link.
- \* 4. Give the group a name such as Seattle Users.
- \* 5. Select Users as the membership type.
- \* 6. Select 'Add dynamic query'.
- \* 7. Select 'City' in the Property drop-down box.
- \* 8. Select 'Equals' in the Operator drop-down box.
- \* 9. Enter Seattle as the Value. You should see the following text in the Expression box: user.city -eq "Seattle"
- \* 10. Click Save to create the group. References:

<https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/groups-dynamic-membership>

**NEW QUESTION 39**

- (Exam Topic 5)

Your network contains an on-premises Active Directory domain.

Your company has a security policy that prevents additional software from being installed on domain controllers.

You need to monitor a domain controller by using Microsoft Azure Advanced Threat Protection (ATP). What should you do? More than once choice may achieve the goal. Select the BEST answer.

- A. Deploy an Azure ATP standalone sensor, and then configure port mirroring.
- B. Deploy an Azure ATP standalone sensor, and then configure detections.
- C. Deploy an Azure ATP sensor, and then configure detections.
- D. Deploy an Azure ATP sensor, and then configure port mirroring.

**Answer:** C

**Explanation:**

If you're installing on a domain controller, you don't need a standalone ATP sensor. You need to configure the detections to detect application installations. With an ATP sensor (non-standalone), you don't need to configure port mirroring.

Reference:

<https://docs.microsoft.com/en-us/azure-advanced-threat-protection/install-atp-step5> <https://docs.microsoft.com/en-us/azure-advanced-threat-protection/atp-capacity-planning#choosing-the-right-sen>

**NEW QUESTION 43**

- (Exam Topic 5)

Your company has three main offices and one branch office. The branch office is used for research. The company plans to implement a Microsoft 365 tenant and to deploy multi-factor authentication.

You need to recommend a Microsoft 365 solution to ensure that multi-factor authentication is enforced only for users in the branch office

What should you include in the recommendation?

- A. Azure AD password protection
- B. a Microsoft Endpoint Manager Device compliance policy
- C. Azure AD conditional access
- D. a Microsoft Endpoint Manager Device configuration profile

**Answer:** B

**NEW QUESTION 45**

- (Exam Topic 5)

Your network contains an on premises Active Directory domain named contoso.com. The domain contains five domain controllers.

Your company purchases Microsoft 365 and creates a Microsoft Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com.

You plan to establish federation authentication between on premises Active Directory and the Azure AD tenant by using Active Directory Federation Services (AD FS).

You need to establish the federation.

What should you do? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point

Action to perform before establishing the federation:

- From the Azure portal, add a custom domain name.
- From the Azure portal, configure an authentication method.
- From a domain controller, install a Pass-through Authentication Agent.
- From a domain controller, install Windows Identity Foundation 3.5.

Tool to use to establish the federation:

- Active Directory Domains and Trusts
- Azure AD Connect
- The AD FS console
- The Azure portal

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

The on-premises Active Directory domain is named contoso.com. Before you can configure federation authentication between on-premises Active Directory and the Azure AD tenant, you need to add the domain contoso.com to Microsoft 365. You do this by adding a custom domain name. The next step is to establish the federation. You can configure AD FS by using Azure AD Connect. Reference: <https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-install-custom#configuring-feder>

**NEW QUESTION 47**

- (Exam Topic 5)

You have a Microsoft Azure Active Directory (Azure AD) tenant that contains the users shown in the following table.

Name	Member of
User1	Group1
User2	Group2
User3	Group3

Your company uses Windows Defender Advanced Threat Protection (ATP). Windows Defender ATP contains the roles shown in the following table.

Name	Permission	Assigner user group
Windows Defender ATP administrator (default)	View data, Alerts investigation, Active remediation actions, Manage security settings	Group3
Role1	View data, Alerts investigation	Group1
Role2	View data	Group2

Windows Defender ATP contains the device groups shown in the following table.

Rank	Machine group	Machine	User access
1	ATP1	Device1	Group1
Last	Ungrouped machines (default)	Device2	Group2

For each of the following statements, select Yes if the statement is true. Otherwise, select No.  
 NOTE: Each correct selection is worth one point.

**Statements**

**Yes**                      **No**

User1 can view Device1 in Windows Defender Security Center.

User2 can sign in to Windows Defender Security Center.

User3 can view Device1 in Windows Defender Security Center.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Box 1:  
 Yes. User1 is in Group1 which is assigned to Role1. Device1 is in the device group named ATP1 which Group1 has access to. Role1 gives Group1 (and User1) View Data Permission. This is enough to view Device1 in Windows Security Center.

Box 2:  
 Yes. User2 is in Group2 which is assigned to Role2. Role2 gives Group2 (and User2) View Data Permission. This is enough to sign in to Windows Security Center.

Box 3:  
 Yes. User3 is in Group3 which is assigned the Windows ATP Administrator role. Someone with a Microsoft Defender ATP Global administrator role has unrestricted access to all machines, regardless of their machine group association and the Azure AD user groups assignments.

Reference:  
<https://docs.microsoft.com/en-us/windows/security/threat-protection/microsoft-defender-atp/user-roles> <https://docs.microsoft.com/en-us/windows/security/threat-protection/microsoft-defender-atp/rbac>

**NEW QUESTION 52**

- (Exam Topic 5)  
 You are developing an app that will query the tenant for the names of all the Microsoft Teams teams in the organization. What permission will the app require? Your solution must follow the principle of least privilege.

- A. Group
- B. Rea
- C. All
- D. Directory.Read.All
- E. Channel.ReadBasic.All
- F. TeamSettings.Read.All

**Answer: D**

**NEW QUESTION 54**

- (Exam Topic 5)  
 Your network contains an on-premises Active Directory domain. The domain contains the users shown in the following table.

Name	Country	Organizational unit (OU)
User1	United States	OU1
User2	Canada	OU1
User3	United States	OU2

You have a Microsoft 365 subscription that is linked to an Azure Active Directory (Azure AD) tenant named contoso.com. You configure Azure AD Connect to sync the on-premises domain to contoso.com as shown in the following exhibit.

**Answer Area**

Statements	Yes	No
User1 syncs to Azure AD.	<input type="radio"/>	<input type="radio"/>
User2 syncs to Azure AD.	<input type="radio"/>	<input type="radio"/>
User3 syncs to Azure AD.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

**Answer Area**

Statements	Yes	No
User1 syncs to Azure AD.	<input checked="" type="radio"/>	<input type="radio"/>
User2 syncs to Azure AD.	<input checked="" type="radio"/>	<input type="radio"/>
User3 syncs to Azure AD.	<input checked="" type="radio"/>	<input type="radio"/>

**NEW QUESTION 58**

- (Exam Topic 5)  
 Your company recently purchased a Microsoft 365 subscription.

You enable Microsoft Azure Multi-Factor Authentication (MFA) for all 500 users in the Azure Active Directory (Azure tenant). You need to generate a report that lists all the users who Azure registration process. What is the best approach to achieve the goal? More than one answer choice achieve the goal. Select the Best answer.

- A. From Azure Cloud Shell, run the Get-Msoluser cmdlet.
- B. From the Azure Active Directory admin center, use the Risky sign-ins blade.
- C. From the Azure Active Directory admin center, use the Multi-factor Authentication – Server Status blade.
- D. From Azure Cloud Shell, run the Get-AzureADUser cmdlet.

**Answer: A**

#### NEW QUESTION 60

- (Exam Topic 5)

You have a Microsoft 365 subscription.

All users have their email stored in Microsoft Exchange Online.

In the mailbox of a user named User, you need to preserve a copy of all the email messages that contain the word ProjectX.

What should you do first?

- A. From the Exchange admin center, start a mail flow message trace.
- B. From the Security & Compliance admin center, start a message trace.
- C. From the Security & Compliance admin center, create a label and label policy.
- D. From the Exchange admin center, create a mail flow rule.

**Answer: C**

#### Explanation:

When you configure conditions for a label, you can automatically assign a label to a document or email. In this case, we would create a label to label all email messages that contain the word ProjectX. We would then create a label policy to preserve a copy of all message that have the label assigned.

Reference:

<https://docs.microsoft.com/en-us/azure/information-protection/configure-policy-classification>

#### NEW QUESTION 62

- (Exam Topic 5)

Your network contains an Active Directory forest named local.

You have a Microsoft 365 subscription. You plan to implement a directory synchronization solution that will use password hash synchronization.

From the Microsoft 365 admin center, you verify the contoso.com domain name. You need to prepare the environment for the planned directory synchronization solution.

What should you do first?

- A. From the public DNS zone of contoso.com, add a new mail exchanger (MX) record.
- B. From Active Directory Domains and Trusts, add contoso.com as a UPN suffix.
- C. From the Microsoft 365 admin center, verify the contoso.com domain name.
- D. From Active Directory Users and Computers, modify the UPN suffix for all users.

**Answer: B**

#### Explanation:

The on-premise Active Directory domain is named contoso.local. Therefore, all the domain user accounts will have a UPN suffix of contoso.local by default.

To enable directory synchronization that will use password hash synchronization, you need to configure the domain user accounts to have the same UPN suffix as the verified domain (contoso.com in this case). Before you can change the UPN suffix of the domain user accounts to contoso.com, you need to add contoso.com as a UPN suffix in the domain.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/plan-connect-userprincipalname>

#### NEW QUESTION 65

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live

environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@M365x981607.onmicrosoft.com Microsoft 365 Password: \*yfLo7lr2&yIf the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10811525

You plan to invite several guest users to access the resources in your organization.

You need to ensure that only guests who have an email address that uses the @contoso.com suffix can connect to the resources in your Microsoft 365 tenant.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

You need to add contoso.com as an allowed domain in the 'External collaboration settings'.

- \* 1. Go to the Azure Active Directory admin center.
- \* 2. Select Users then select 'User settings'.
- \* 3. Under External Users, select the 'Manage external collaboration settings'.
- \* 4. Under 'Collaboration restrictions', select the 'Allow invitations only to the specified domains (most restrictive)' option.
- \* 5. Under, Target Domains, type in the domain name 'contoso.com'
- \* 6. Click the Save button at the top of the screen to save your changes. References:  
<https://docs.microsoft.com/en-us/azure/active-directory/b2b/allow-deny-list>

**NEW QUESTION 66**

- (Exam Topic 5)

Your network contains an on-premises Active Directory domain named contoso.com that is synced to a Microsoft Azure Active Directory (Azure AD) tenant. The on-premises domain contains a server named Server1 that runs Windows Server 2016 and 200 client computers that run Windows 10.

Your company purchases a Microsoft 365 subscription.

On Server1, you create a file share named Share1. You extract the Microsoft Office Deployment Tool (ODT) to Share1.

You need to deploy Office 365 ProPlus, and the French language pack from Share1 to the Windows 10 computers.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Actions**

**Answer Area**

- Create an XML configuration file.
- On Server1, run `setup.exe` and specify the `/configure` parameter.
- On every client computer, run `setup.exe` and specify the `/configure` parameter.
- On Server1, run `setup.exe` and specify the `/package` parameter.
- On every client computer, run `setup.exe` and specify the `/download` parameter.
- On Server1, run `setup.exe` and specify the `/download` parameter.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Note:

Step 1: Create an XML configuration file with the source path and download path for the installation files. Step 2: On the deployment server, run the ODT executable in download mode and with a reference to the XML configuration file.

Step 3: Create another XML configuration file with the source path to the installation files.

Step 4: On the client computer, run the ODT executable in configure mode and with a reference to the XML configuration file.

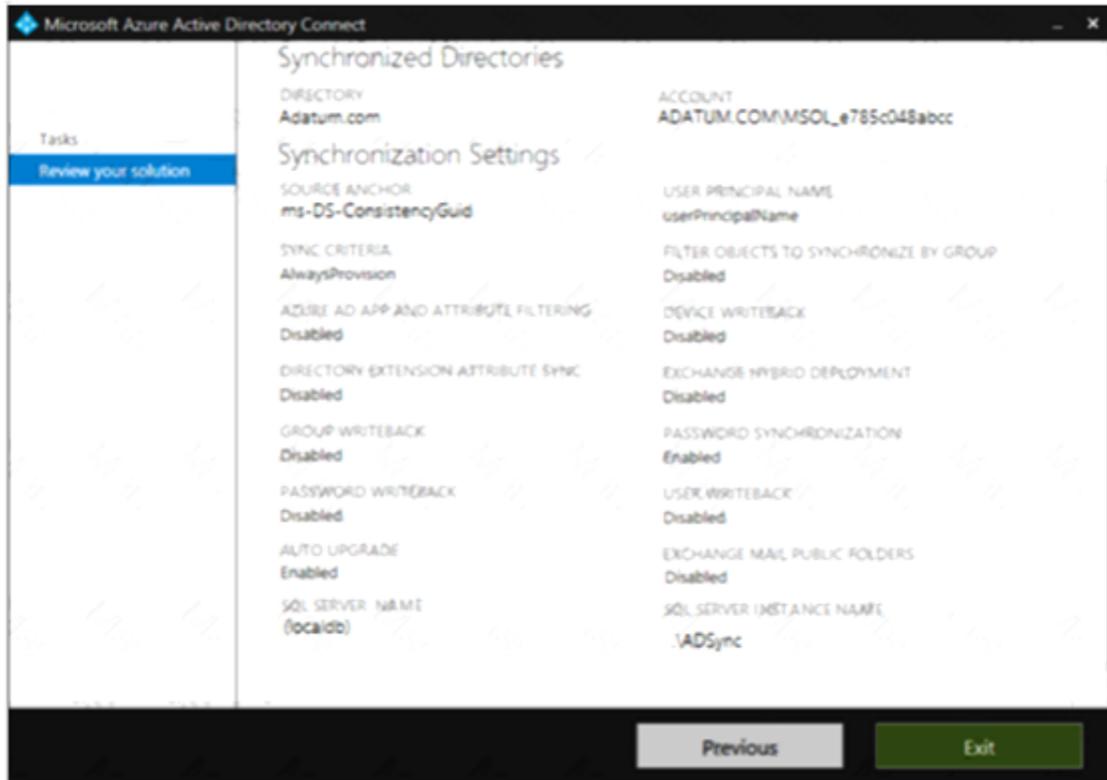

Reference:

<https://docs.microsoft.com/en-us/DeployOffice/overview-of-the-office-2016-deployment-tool>

**NEW QUESTION 70**

- (Exam Topic 5)

Your network contains an on-premises Active Directory domain that is synced to Microsoft Azure Active Directory (Azure AD) as shown in the following exhibit.

An on-premises Active Directory user account named Allan Yoo is synchronized to Azure AD. You view Allan's account from Microsoft 365 and notice that his username is set to Allan@contoso.onmicrosoft.com.  
 For each of the following statements, select Yes if the statement is true. Otherwise, select No. NOTE: Each correct selection is worth one point.

Statements	Yes	No
From the Azure portal, you can reset the password of Allan Yoo.	<input type="radio"/>	<input type="radio"/>
From the Azure portal, you can configure the job title of Allan Yoo.	<input type="radio"/>	<input type="radio"/>
From the Azure portal, you can configure the usage location of Allan Yoo.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Allan Yoo's user account is synchronized from the on-premise Active Directory. This means that most user account settings have to be configured in the on-premise Active Directory.  
 In the exhibit, Password Writeback is disabled. Therefore, you cannot reset the password of Allan Yoo from the Azure portal.  
 You also cannot change Allan Yoo's job title in the Azure portal because his account is synchronized from the on-premise Active Directory.  
 One setting that you can configure for synchronized user accounts is the usage location. The usage location must be configured on a user account before you can assign licenses to the user.  
 Reference:  
<https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-sspr-writeback>

**NEW QUESTION 72**

- (Exam Topic 5)

You have a Microsoft 365 tenant that contains a Microsoft Power Platform environment. You need to ensure that only specific users can create new environments. What should you do in the Power Platform admin center?

- A. From Data policies, create a new data policy.
- B. From Data integration, create a new connection set.
- C. From Power Platform settings, modify the Governance settings for the environment.
- D. From Environments, modify the behaviour settings for the default environment.

**Answer:** C

**Explanation:**

Reference:  
<https://docs.microsoft.com/en-us/power-platform/admin/control-environment-creation>

**NEW QUESTION 73**

- (Exam Topic 5)

You have a Microsoft Teams app that contains a conversational bot. The bot uses task modules to reply to users. When the bot receives a new message, the following code is executed before a response is sent back to the user to decide whether the bot should continue the conversation.

```

80 case "task/submit": {
81   if (invokeValue.data !== undefined) {
82     switch (invokeValue.data.taskResponse) {
83       case "message":
84         session.send("***task/submit results from the Adaptive card:**\n*** + JSON.stringify(invokeValue) + ***");
85         break;
86       case "continue":
87         let fetchResponse = fetchTemplates.submitResponse;
88         fetchResponse.task.value.card = renderACAttachment(cardTemplates.acSubmitResponse, { results: JSON.stringify(invokeValue.data) });
89         cb(null, fetchResponse, 200);
90         break;

```

Answer Area

If invokeValue.data.taskResponse equals "message", the user will [answer choice]

stop interacting with the bot.

continue interacting with the bot.

receive a webpage pop-up window.

receive a final message from the bot.

These are the selections for the statement if invokeValue.data.taskResponse equals "message" the user will [answer choice]

If invokeValue.data.taskResponse equals "final", the user will [answer choice]

stop interacting with the bot.

continue interacting with the bot.

receive a webpage pop-up window.

receive a final message from the bot.

These are the selections for the statement if invokeValue.data.taskResponse equals "final" the user will [answer choice]

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

Reference:  
<https://github.com/OfficeDev/microsoft-teams-sample-task-module-nodejs>

**NEW QUESTION 75**

- (Exam Topic 5)

You are developing a new application named App1 that uses the Microsoft identity platform to authenticate to Azure Active Directory (Azure AD). Currently, App1 can read user profile information. You need to allow App1 to read the user's calendar.

Solution: Add https://graph.windows.net/user, read to the list of scopes during the initial login request Does this meet the goal?

- A. Yes
- B. No

**Answer: B**

**NEW QUESTION 76**

- (Exam Topic 5)

Your network contains an Active Directory domain named fabrikam.com. The domain contains the objects shown in the following table.

Name	Type	In organizational unit (OU)
User1	User	OU1
User2	User	OU1
Group1	Security Group - Global	OU1
User3	User	OU2
Group2	Security Group - Global	OU2

The group have the members shown in the following table.

Group	Members
Group1	User1
Group2	User2, User3, Group1

You are configure synchronization between fabrikam.com and a Microsoft Azure Active Director (Azure AD) tenant. You configure the domain/OU Filtering settings in Azure AD Connect as shown in the Domain>OU Filtering exhibit. (Click the Domain/OU Filtering tab.) You configure the Filtering in Azure Connect as shown in the Filtering exhibit. (Click the Filtering tab.) NOTE: Each correct selection is worth one point.

Answer Area

Statements	Yes	No
User2 will synchronize to Azure AD.	<input type="radio"/>	<input type="radio"/>
Group2 will synchronize to Azure AD.	<input type="radio"/>	<input type="radio"/>
User3 will synchronize to Azure AD.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Box 1: No

The filtering is configured to synchronize Group2 and OU2 only. The effect of this is that only members of Group2 who are in OU2 will be synchronized.

User2 is in Group2. However, the User2 account object is in OU1 so User2 will not synchronize to Azure AD. Box 2: Yes

Group2 is in OU2 so Group2 will synchronize to Azure AD. However, only members of the group who are in OU2 will synchronize. Members of Group2 who are in OU1 will not synchronize.

Box 3: Yes

User3 is in Group2 and in OU2. Therefore, User3 will synchronize to Azure AD. References:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-sync-configure-filtering#group-b>

**NEW QUESTION 78**

- (Exam Topic 5)

You have a Microsoft 365 subscription that uses an Azure Directory (Azure AD) tenant named Contoso.com. The tenant contains the users shown in the following table.

Name	Role
User1	Exchange administrator
User2	User administrator
User3	Global administrator
User4	None

You add another user named user5 to the User administrator role. You need to identify which management tasks User5 can perform. Which two tasks should you identify? Each correct answer presents a complete solution.

- A. Reset the password of any user in Azure AD.
- B. Delete any user in Azure AD.
- C. Reset the password of User2 and User4 only.
- D. Reset the password of User4 only.
- E. Delete User1, User2, and User4 only.
- F. Delete User2 and User4 only.

**Answer:** CF

**Explanation:**

Users with the User Administrator role can create users and manage all aspects of users with some restrictions (see below).

Only on users who are non-admins or in any of the following limited admin roles:

- > Directory Readers
- > Guest Inviter
- > Helpdesk Administrator
- > Message Center Reader
- > Reports Reader
- > User Administrator Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/directory-assign-admin-roles#availab>

**NEW QUESTION 83**

- (Exam Topic 5)

Your network contains an Active Directory domain named contoso.com. The domain contains five domain controllers.

You purchase Microsoft 365 and plan to implement several Microsoft 365 services.

You need to identify an authentication strategy for the planned Microsoft 365 deployment. The solution must meet the following requirements:

- > Ensure that users can access Microsoft 365 by using their on-premises credentials.
- > Use the existing server infrastructure only.
- > Store all user passwords on-premises only.
- > Be highly available.

Which authentication strategy should you identify?

- A. pass-through authentication and seamless SSO
- B. pass-through authentication and seamless SSO with password hash synchronization
- C. password hash synchronization and seamless SSO
- D. federation

**Answer:** A

**Explanation:**

Azure AD Pass-through Authentication. Provides a simple password validation for Azure AD authentication services by using a software agent that runs on one or more on-premises servers. The servers validate the users directly with your on-premises Active Directory, which ensures that the password validation doesn't happen in the cloud.

Reference:

<https://docs.microsoft.com/en-us/azure/security/fundamentals/choose-ad-authn>

**NEW QUESTION 86**

- (Exam Topic 5)

You have a data loss prevention (DLP) policy.

You need to increase the likelihood that the DLP policy will apply to data that contains medical terms from the International Classification of Diseases (ICD-9-CM). The solution must minimize the number of false positives.

Which two settings should you modify? To answer, select the appropriate settings in the answer area. NOTE: Each correct selection is worth one point.

Any of these ▾

**Medical Terms** ✎

Sensitive information type

International Classification of Diseases (ICD-9-CM)	Instance count	Match accuracy
	<div style="display: flex; justify-content: space-around;"> <div style="border: 1px solid #ccc; padding: 2px 5px; width: 30px; text-align: center;">min 1</div> <div style="border: 1px solid #ccc; padding: 2px 5px; width: 30px; text-align: center;">max any</div> </div>	<div style="display: flex; justify-content: space-around;"> <div style="border: 1px solid #ccc; padding: 2px 5px; width: 30px; text-align: center;">min 50</div> <div style="border: 1px solid #ccc; padding: 2px 5px; width: 30px; text-align: center;">max 100</div> </div>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

You can tune your rules by adjusting the instance count and match accuracy to make it harder or easier for content to match the rules. Each sensitive information type used in a rule has both an instance count and match accuracy.

To make the rule easier to match, decrease the min

count and/or increase the max

count. You can also set max

to any

by deleting the numerical value.

To minimize the number of false positives, we need to increase the minimum match accuracy.

A sensitive information type is defined and detected by using a combination of different types of evidence. Commonly, a sensitive information type is defined by multiple such combinations, called patterns. A pattern that requires less evidence has a lower match accuracy (or confidence level), while a pattern that requires more evidence has a higher match accuracy (or confidence level).

Reference:

<https://docs.microsoft.com/en-us/office365/securitycompliance/data-loss-prevention-policies>

<https://docs.microsoft.com/en-us/office365/securitycompliance/what-the-sensitive-information-types-look-for#i>

**NEW QUESTION 91**

- (Exam Topic 5)

In Microsoft 365, you configure a data loss prevention (DLP) policy named Policy1. Policy1 detects the sharing of United States (US) bank account numbers in email messages and attachments.

Policy1 is configured as shown in the exhibit. (Click the Exhibit tab.)

Use actions to protect content when the conditions are met.

**Restrict access or encrypt the content**

- Block people from sharing and restrict access to shared content  
 By default, users are blocked from sending email messages to people. You can choose who has access to shared SharePoint and OneDrive content.  
 Block these people from accessing SharePoint and OneDrive content
  - Everyone. Only the content owner, the lastmodifier, and the site admin will continue to have access.
  - Only people outside your organization. People inside your organization will continue to have access.
  - Encrypt email messages (applies only to content to Exchange)

You need to ensure that internal users can email documents that contain US bank account numbers to external users who have an email suffix of contoso.com. What should you configure?

- A. an action
- B. a group
- C. a condition
- D. an exception

**Answer: D**

**Explanation:**

You need to add an exception. In the Advanced Settings of the DLP policy, you can add a rule to configure the Conditions and Actions. There is also an 'Add Exception' button. This gives you several options that you can select as the exception. One of the options is 'except when recipient domain is'. You need to select that option and enter the domain name contoso.com.

Reference:

<https://docs.microsoft.com/en-us/office365/securitycompliance/data-loss-prevention-policies#how-dlp-policies>

**NEW QUESTION 94**

- (Exam Topic 5)

Your network contains an Active Directory domain and a Microsoft Azure Active Directory (Azure AD) tenant. The network uses a firewall that contains a list of allowed outbound domains. You began to implement directory synchronization. You discover that the firewall configuration contains only the following domain names in the list of allowed domains:

- \*.microsof.com
- \*.office.com

Directory synchronization fails.

You need to ensure that directory synchronization completes successfully.

What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. From the firewall, allow the IP address range of the Azure data center for outbound communication.
- B. From Azure AD Connect, modify the Customize synchronization options task
- C. Deploy an Azure AD Connect sync server in staging mode.
- D. From the firewall, create a list of allowed inbound domains.
- E. From the firewall, modify the list of allowed outbound domains.

**Answer: E**

**Explanation:**

Azure AD Connect needs to be able to connect to various Microsoft domains such as login.microsoftonline.com. Therefore, you need to modify the list of allowed outbound domains on the firewall.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/reference-connect-ports>

**NEW QUESTION 98**

- (Exam Topic 5)

You have a Microsoft 365 E5 subscription that contains the users shown in the following table.

Name	Role
Admin1	Exchange Administrator
Admin2	SharePoint Administrator
Admin3	Global Reader
Admin4	Usage Summary Reports Reader

You enable Microsoft 365 usage analytics for Microsoft Power BI.

Which users can use Power BI to connect to Microsoft 365 usage analytics and review usage analytics reports?

- A. Admin3 only
- B. Admin 1 and Admin2 only
- C. Admin3 and Admin4 only
- D. Admin1, Admm2, and Admm3 only
- E. Admm1, Admm2, Admin3, and Admin4

Answer: A

### NEW QUESTION 100

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You need to prevent all the users in your organization from sending an out of office reply to external users. To answer, sign in to the Microsoft 365 portal.

- A. Mastered
- B. Not Mastered

Answer: A

### Explanation:

You need to modify the default remote domain. When you add a remote domain, you specify the domain name and the settings apply to that domain. The default remote domain applies to all other domains. Therefore, we need to disable Out of Office replies for external users in the settings of the default remote domain.

- \* 1. Go to the Exchange Admin Center.
- \* 2. Click Mail Flow in the left navigation pane.
- \* 3. Click on Remote Domains.
- \* 4. Select the default remote domain and click the Edit icon (pencil icon).
- \* 5. In the 'Out of Office automatic reply types' section, select 'None'.
- \* 6. Click Save to save to changes to the default remote domain.

### NEW QUESTION 102

- (Exam Topic 5)

Your network contains two disconnected on-premises Active Directory forests named adatum.com and contoso.com.

You have an Azure AD tenant named nwtraders.com

You need to sync the on-premises forests to nwtraders.com. The solution must meet the following requirements:

- Provide the ability to connect to adatum.com and contoso.com.
- Provide support for Microsoft Exchange hybrid.
- Provide the ability to sync device objects.
- Minimize administrative effort.

**Tools**

- Azure AD Connect
- Azure AD Connect Cloud Sync
- Active Directory Migration Tool

**Answer Area**

Provide the ability to sync device objects:

Provide support for Microsoft Exchange hybrid:

Provide the ability to connect to adatum.com and contoso.com:

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

**Tools**

- Azure AD Connect
- Azure AD Connect Cloud Sync
- Active Directory Migration Tool

**Answer Area**

Provide the ability to sync device objects:

Provide support for Microsoft Exchange hybrid:

Provide the ability to connect to adatum.com and contoso.com:

**NEW QUESTION 104**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a hybrid deployment of Microsoft 365 that contains the objects shown in the following table.

Name	Type	Source
User1	User	Azure Active Directory (Azure AD)
User2	User	Windows Server Active Directory
Group1	Group	Cloud
Group2	Group	Windows Server Active Directory

Azure AD Connect has the following settings:

- > Password Hash Sync: Enabled
- > Password writeback: Enabled
- > Group writeback: Enabled

You need to add User2 to Group 2.

Solution: You use the Security & Compliance admin center. Does this meet the goal?

- A. Yes
- B. No

**Answer:** B

**NEW QUESTION 105**

- (Exam Topic 5)

Your company has a Microsoft 365 E5 subscription. Users in the research department work with sensitive data.

You need to prevent the research department users from accessing potentially unsafe websites by using hyperlinks embedded in email messages and documents.

Users in other departments must not be restricted. What should you do from the Security & Compliance admin center?

- A. Create a data loss prevention (DLP) policy that has a Content contains condition.
- B. Create a data loss prevention (DLP) policy that has a Content is shared condition.
- C. Modify the default safe links policy.
- D. Create a new safe links policy.

**Answer:** D

**Explanation:**

ATP Safe Links, a feature of Office 365 Advanced Threat Protection (ATP), can help protect your organization from malicious links used in phishing and other attacks. If you have the necessary permissions for the Office 365 Security & Compliance Center, you can set up ATP Safe Links policies to help ensure that when people click web addresses (URLs), your organization is protected. Your ATP Safe Links policies can be configured to scan URLs in email and URLs in Office documents.

Reference:

<https://docs.microsoft.com/en-us/office365/securitycompliance/set-up-atp-safe-links-policies#policies-that-apply>

**NEW QUESTION 107**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an on-premises Active Directory forest named contoso.com. The forest contains the following domains:

> Contoso.com

> East.contoso.com

An Azure AD Connect server is deployed to contoso.com. Azure AD Connect syncs to an Azure Active Directory (Azure AD) tenant.

You deploy a new domain named west.contoso.com to the forest.

You need to ensure that west.contoso.com syncs to the Azure AD tenant.

Solution: You install a new Azure AD Connect server in west.contoso.com and set AD Connect to active mode.

Does this meet the goal?

A. Yes

B. No

**Answer: A**

#### NEW QUESTION 109

- (Exam Topic 5)

Your company has an on-premises Microsoft SharePoint Server environment and a Microsoft 365 subscription.

When users search for content from Microsoft 365, you plan to include content from the on-premises SharePoint Server environment in the results.

You need to add crawled metadata from the on-premises SharePoint Server content to the Microsoft Office 365 search index.

What should you do first?

A. Run the SharePoint Hybrid Configuration Wizard.

B. Create a site collection that uses the Basic Search Center template.

C. Run the SharePoint Migration Tool.

D. Create a site collection that uses the Enterprise Search Center template.

**Answer: A**

#### NEW QUESTION 112

- (Exam Topic 5)

You have a Microsoft 365 subscription.

Your company purchases a new financial application named App1.

From Cloud Discovery in Microsoft Cloud App Security, you view the Discovered apps page and discover that many applications have a low score because they are missing information about domain registration and consumer popularity.

You need to prevent the missing information from affecting the score. What should you configure from the Cloud Discover settings?

A. App tags

B. Score metrics

C. Organization details

D. Default behavior

**Answer: B**

#### Explanation:

An app's score in Cloud Discovery is based on categories such as General, Security, Compliance and Legal. Each category has several parameters. For example, the domain registration and consumer popularity parameters are part of the General category. These parameters are known as Score Metrics.

You can modify the default weights given to the Cloud Discovery score configuration. By default, all the various parameters evaluated are given an equal weight. If there are certain parameters that are more or less important to your organization, you can adjust the weight of each score metric.

References:

<https://docs.microsoft.com/en-us/cloud-app-security/discovered-app-queries>

#### NEW QUESTION 115

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest. You deploy Microsoft 365.

You plan to implement directory synchronization.

You need to recommend a security solution for the synchronized identities. The solution must meet the following requirements:

> Users must be able to authenticate successfully to Microsoft 365 services if Active Directory becomes unavailable.

> Users passwords must be 10 characters or more.

Solution: Implement password hash synchronization and configure password protection in the Azure AD tenant.

Does this meet the goal?

A. Yes

B. No

**Answer: B**

#### Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/how-to-connect-password-hash-synchronization>

### NEW QUESTION 119

- (Exam Topic 5)

You plan to develop a SharePoint Framework (SPfx) web part by using the ReactJS framework.

You need to ensure that all the web part fields and controls adopt the theme of the site when you deploy the web part. The solution must minimize development effort

What should you include in the solution?

- A. Material-UI
- B. FluentUI
- C. Microsoft Fluid Framework
- D. HTML5 and CSS

**Answer: B**

### NEW QUESTION 120

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@LODSe878763.onmicrosoft.com

Microsoft 365 Password: m3t^We\$Z7&xy

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 11440873

Next

You need to create a policy that allows a user named Lee Gu to use Outlook Web App to review 50 percent of the outbound email messages sent by a user named Joni Sherman.

To answer, sign in to the Microsoft 365 portal.

- A. Mastered
- B. Not Mastered

**Answer: A**

#### Explanation:

You need to configure a Supervision Policy.

\* 1. Go to <https://protection.office.com> or navigate to the Security & Compliance admin center.

\* 2. In the left navigation pane, select Supervision.

\* 3. Click the '+Create' button to create a new supervision policy.

\* 4. Give the policy a name such as 'Joni Sherman' and click Next.

\* 5. In the 'Supervised users' section, click '+Add users or groups'.

\* 6. Select Joni Sherman from the users list and click the Add button.

\* 7. Deselect the 'Teams chats' and 'Skype for Business Conversations' checkboxes leaving only the 'Exchange Email' checkbox ticked and click Next.

\* 8. Under 'Direction is', deselect Inbound leaving only Outbound selected and click Next.

\* 9. In the 'Percentage to review' section, enter 50 and click Next.

\* 10. In the 'Reviewers' section, start typing Lee Gu then select his account when it appears.

\* 11. Click Next.

\* 12. On the 'Review your settings' page, check the settings are correct the click the Finish button to create the policy.

**NEW QUESTION 121**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has a Microsoft Office 365 tenant.

You suspect that several Office 365 features were recently updated.

You need to view a list of the features that were recently updated in the tenant. Solution: You use the View service requests option in the Microsoft 365 admin center. Does this meet the goal?

- A. Yes
- B. NO

**Answer: B**

**Explanation:**

A service request is a support ticket. Therefore, the View service requests option in the Microsoft 365 admin center displays a list of support tickets. It does not display a list of the features that were recently updated in the tenant so this solution does not meet the goal.

To meet the goal, you need to use Message center in the Microsoft 365 admin center.

Reference:

<https://docs.microsoft.com/en-us/office365/admin/manage/message-center?view=o365-worldwide>

**NEW QUESTION 126**

- (Exam Topic 5)

Your network contains an on-premises Active Directory domain that syncs to Azure Active Directory (Azure AD).

The on-premises network contains a Microsoft SharePoint Server 2019 farm. The company purchases a Microsoft 365 subscription.

You have the users shown in the following table

Name	Source
User1	Windows Active Directory
User2	Azure Active Directory

You plan to assign User1 and User2 the required roles to run the SharePoint Hybrid Configuration Wizard. User1 will be used for on-premises credentials and User2 will be used for cloud credentials.

You need to assign the correct role to User2. The solution must use the principle of least privilege. Which role should you assign to User2?

- A. Application administrator
- B. SharePoint farm administrator
- C. Global administrator
- D. SharePoint administrator

**Answer: C**

**Explanation:**

To run the SharePoint Hybrid Configuration Wizard, you need to provide credentials of a user (in this case User2) of a Global Administrator account in Azure Active Directory.

Reference:

<https://www.c-sharpcorner.com/article/sharepoint-2019-enable-hybrid-experience/> <https://docs.microsoft.com/en-us/sharepoint/hybrid/accounts-needed-for-hybrid-configuration-and-testing>

**NEW QUESTION 127**

- (Exam Topic 5)

You have a Microsoft 365 subscription.

You view the service advisories shown in the following exhibit.

The screenshot shows the 'Service health' page in the Microsoft 365 admin center. A notification banner at the top states 'Some services have posted advisories' with a timestamp of '2018-10-05 08:43(UTC)' and a 'View history' link. On the left, there is a navigation pane with 'All services', 'Incidents', and 'Advisories'. The main content area lists several services with their status:

- Office 365 Portal: 1 advisory
- SharePoint Online: 1 advisory
- Office Subscription: Service is healthy
- Microsoft Intune: Service is healthy
- Microsoft StaffHub: Service is healthy
- Microsoft Teams: Service is healthy
- Mobile Device Management for Office 365: Service is healthy
- Azure Information Protection: Service is healthy
- Exchange Online: Service is healthy

You need to ensure that users who administer Microsoft SharePoint Online can view the advisories to investigate health issues.

Which role should you assign to the users?

- A. SharePoint administrator
- B. Message Center reader
- C. Reports reader
- D. Service administrator

**Answer:** D

**Explanation:**

People who are assigned the global admin or service administrator role can view service health. To allow Exchange, SharePoint, and Skype for Business admins to view service health, they must also be assigned the Service admin role. For more information about roles that can view service health.

Reference:

<https://docs.microsoft.com/en-us/office365/enterprise/view-service-health>

**NEW QUESTION 132**

- (Exam Topic 5)

You publish an enterprise application named App1 that process financial data.

You need to ensure that access to App1 is revoked for users who no longer require view the processed financial data.

What should you configure?

- A. An access review
- B. An app protection policy
- C. A conditional access policy
- D. An owner

**Answer:** A

**Explanation:**

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/governance/create-access-review>

**NEW QUESTION 134**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 subscription.

You need to prevent users from accessing your Microsoft SharePoint Online sites unless the users are connected to your on-premises network.

Solution: From the Azure Active Directory admin center, you create a trusted location and a conditional access policy.

Does this meet the goal?

- A. Yes
- B. No

**Answer:** A

**Explanation:**

Conditional Access in SharePoint Online can be configured to use an IP Address white list to allow access. References:

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/location-condition> <https://techcommunity.microsoft.com/t5/Microsoft-SharePoint-Blog/Conditional-Access-in-SharePoint-Onlinea>

**NEW QUESTION 135**

- (Exam Topic 5)

Your network contains an Active Directory forest. The forest contains two domains named contoso.com and adatum.com.

Your company recently purchased a Microsoft 365 subscription. You deploy a federated identity solution to the environment.

You use the following command to configure contoso.com for federation. Convert-MsolDomaintoFederated -DomainName contoso.com

In the Microsoft 365 tenant, an administrator adds and verifies the adatum.com domain name. You need to configure the adatum.com Active Directory domain for federated authentication.

Which two actions should you perform before you run the Azure AD Connect wizard? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. From Windows PowerShell, run the Convert-MsolDomaintoFederated-DomainName contoso.com -SupportMultipleDomain command.
- B. From Windows PowerShell, run the New-MsolFederatedDomain-SupportMultipleDomain -DomainName contoso.com command.
- C. From Windows PowerShell, run the New-MsolFederatedDomain-DomainName adatum.com command.
- D. From Windows PowerShell, run the Update-MSOLFederatedDomain-DomainName contoso.com -SupportMultipleDomain command.
- E. From the federation server, remove the Microsoft Office 365 relying party trust.

**Answer:** AE

**Explanation:**

When the Convert-MsolDomaintoFederated -DomainName contoso.com command was run, a relying party trust was created.

Adding a second domain (adatum.com in this case) will only work if the SupportMultipleDomain switch was used when the initial federation was configured by running the Convert-MsolDomaintoFederated

-DomainName contoso.com command.

Therefore, we need to start again by removing the relying party trust then running the Convert-MsolDomaintoFederated command again with the SupportMultipleDomain switch.

**NEW QUESTION 136**

- (Exam Topic 5)

Your company has a hybrid deployment of Microsoft 365.

Users authenticate by using pass-through authentication. Several Microsoft Azure AD Connect Authentication Agents are deployed.

You need to verify whether all the Authentication Agents are used for authentication. What should you do?

- A. From the Azure portal, use the Troubleshoot option on the Pass-through authentication page.
- B. From Performance Monitor, use the #PTA authentications counter.
- C. From the Azure portal use the Diagnostics settings on the Monitor blade.
- D. From Performance Monitor, use the Kerberos authentications counter.

**Answer:** A

**Explanation:**

On the Troubleshoot page, you can view how many agents are configured. If you click on the agents link, you can view the status of each agent. Each agent will have a status of Active or Inactive.

Reference:

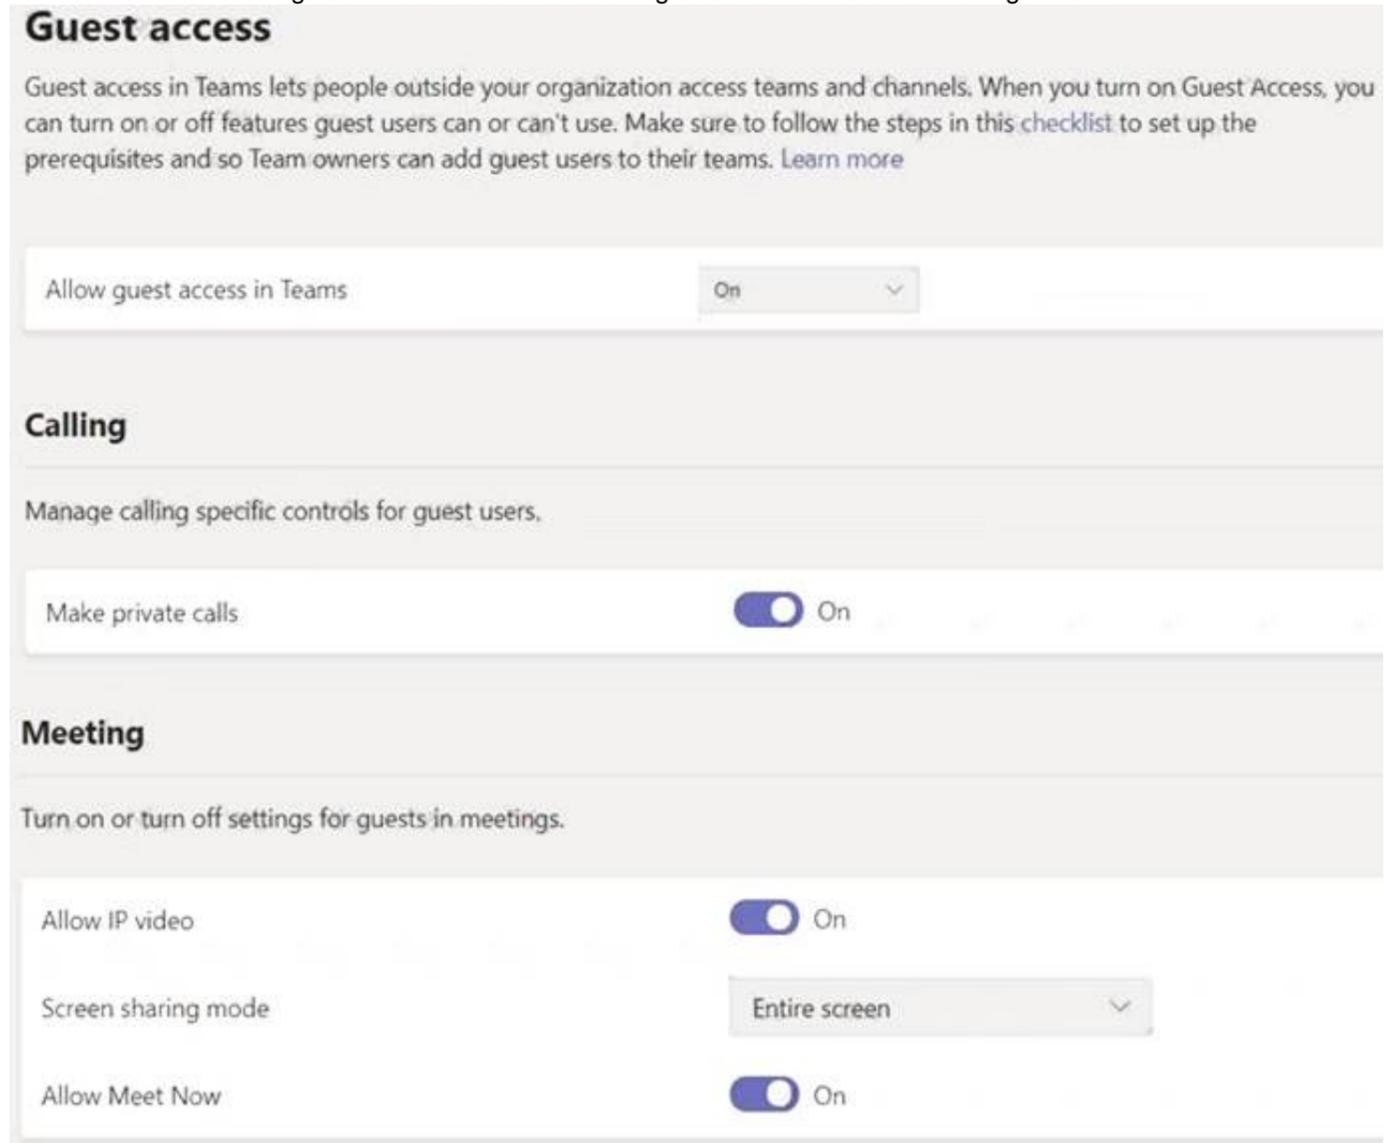

<https://docs.microsoft.com/en-us/azure/active-directory/hybrid/tshoot-connect-pass-through-authentication>

**NEW QUESTION 139**

- (Exam Topic 5)

Your company has a Microsoft 365 tenant named litwareinc.com.

The Guest access settings in Microsoft Teams are configured as shown in the following exhibit.

The External access settings in Microsoft Teams are configured as shown in the following exhibit.

## External access

External access lets your Teams and Skype for Business users communicate with other users that are outside of your organization. By default, your organization can communicate with all external domains. If you add blocked domains, all other domains will be allowed but if you add allowed domains, all other domains will be blocked. [Learn more](#)

Users can communicate with other Skype for Business and Teams users  Off

Users can communicate with Skype users  Off

+ Add a domain

Name	Status
contoso.com	Allowed

Save Discard

The company has a third-party supplier named adventureworks.com. Users in litwareinc.com collaborate with the following users by using Microsoft Teams:

- > User1@contoso.com
- > User2@adventureworks.com

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Statements	Yes	No
User2@adventureworks.com can share files by using a Microsoft Teams channel of litwareinc.com.	<input type="radio"/>	<input type="radio"/>
User1@contoso.com can use Meet now in Microsoft Teams.	<input type="radio"/>	<input type="radio"/>
Litwareinc.com users can block user1@contoso.com in Microsoft Teams.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Graphical user interface, text, application Description automatically generated

The answer to this question depends on whether User1 and User2 have been added as guests. The question does not say that they are guests so we would have to assume they're not.

External Access is turned off. Even with the Contoso.com domain added as an allowed domain, the Off settings override this. If the external access settings were 'On', they would be on for only the Contoso.com domain.

Box 1: No

If External Access was On, the answer to this would still be No. If User2 was a guest, the answer to this would be Yes.

Box 2: No

If External Access was On, the answer to this would still be No. External Access does not enable Meet Now for the external user. If User1 was a guest, the answer to this would be Yes.

Box 3: No

If External Access was On, the answer to this would still be No. External Access does not allow blocking. If User1 was a guest, the answer to this would be Yes.

Reference:

<https://docs.microsoft.com/en-us/microsoftteams/set-up-guests>

<https://docs.microsoft.com/en-us/microsoftteams/communicate-with-users-from-other-organizations>

**NEW QUESTION 141**

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Lab Instance: 10811525

You need to prevent non-administrators in your organization from registering applications.

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

You need to configure the App Registrations setting in Azure Active Directory.

- \* 1. Go to the Azure Active Directory admin center.
- \* 2. Select Azure Active Directory.
- \* 3. Select 'User settings'
- \* 4. In the 'App registrations' section, toggle the 'Users can register applications' setting to No.
- \* 5. Click Save to save the changes.

**NEW QUESTION 144**

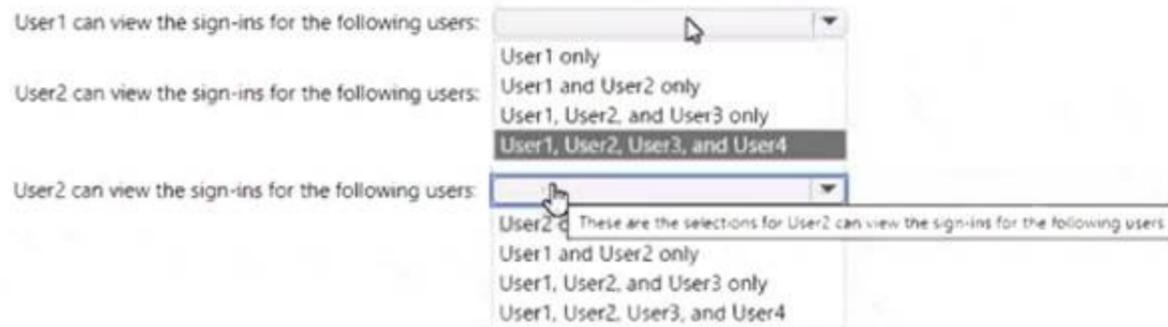

- (Exam Topic 5)

You have a Microsoft 365 subscription that uses an Azure AD tenant named contoso.com. The tenant contains the user's shown in the following table.

Name	Role
User1	Report reader
User2	User administrator
User3	Security administrator
User4	Global administrator

From the Sign-ins blade of the Azure Active Directory admin center, for which users can User1 and User2 view the sign-ins? To answer, select the appropriate options in the answer area.

**Answer Area**

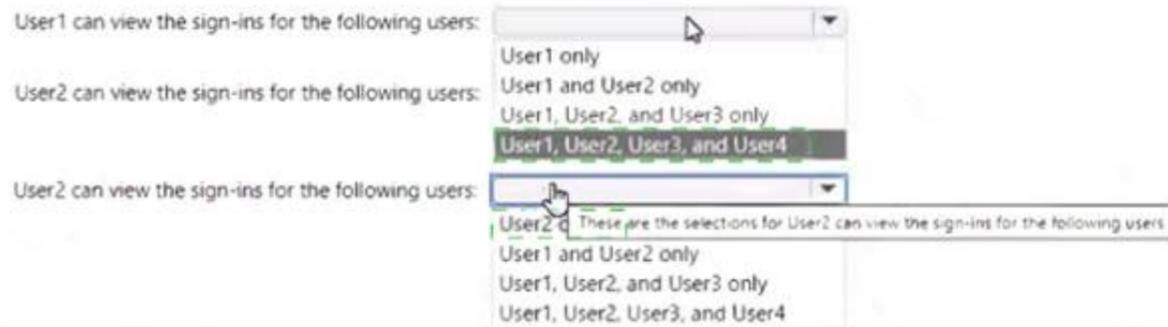

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

**Answer Area**

**NEW QUESTION 146**

- (Exam Topic 5)

You have a Microsoft 365 tenant.

You have a line-of-business application named App1 that users access by using the My Apps portal.

After some recent security breaches, you implement a conditional access policy for App1 that uses Conditional Access App Control.

You need to be alerted by email if impossible travel is detected for a user of App1. The solution must ensure that alerts are generated for App1 only.

What should you do?

- A. From Microsoft Cloud App Security, modify the impossible travel alert policy.
- B. From Microsoft Cloud App Security, create a Cloud Discovery anomaly detection policy.
- C. From the Azure Active Directory admin center, modify the conditional access policy.
- D. From Microsoft Cloud App Security, create an app discovery policy.

**Answer:** A

**Explanation:**

Impossible travel detection identifies two user activities (is a single or multiple sessions) originating from geographically distant locations within a time period shorter than the time it would have taken the user to travel from the first location to the second.  
 We need to modify the policy so that it applies to App1 only. Reference:  
<https://docs.microsoft.com/en-us/cloud-app-security/anomaly-detection-policy>

**NEW QUESTION 151**

- (Exam Topic 5)

You have a Microsoft 365 subscription and a DNS domain. The domain is hosted by a third-party DNS service.

You plan to add the domain to the subscription.

You need to use Microsoft Exchange Online to send and receive emails for the domain.

Which type of DNS record should you add to the DNS zone of the domain for each task? To answer, drag the appropriate records to the correct tasks. Each record may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**Answer Area**

Route email for the domain to Exchange Online	<input type="text"/>
Enable Microsoft Outlook to auto discover the Exchange Online server for the domain.	<input type="text"/>
Help prevent spam for the domain.	<input type="text"/>

- A
- CNAME
- MX
- SRV
- TXT

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

Box 1: MX

When you update your domain's MX record, all new email for anyone who uses your domain will now come to Microsoft 365.

Box 2: CNAME

Add CNAME records to connect other service. You can add CNAME records for each service that you want to connect.

Box 3: TXT

Add or edit an SPF TXT record to help prevent email spam Reference:

<https://docs.microsoft.com/en-us/microsoft-365/admin/get-help-with-domains/create-dns-records-at-any-dns-hos>

Lab Instance: 10887751

You plan to provide an external user named fabrikamuser@fabrikam.com with access to several resources in your Microsoft 365 tenant.

You need to ensure that the external user can be added to Office 365 groups.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

You need to create a guest account for the external user.

- \* 1. Go to the Azure Active Directory admin center.
- \* 2. Select Users.
- \* 3. Click the 'New guest user' link.
- \* 4. Select the 'Invite user' option.
- \* 5. Give the account a name and enter fabrikamuser@fabrikam.com in the email address field.
- \* 6. Click the 'Invite' button. References:  
<https://docs.microsoft.com/en-us/azure/active-directory/b2b/b2b-quickstart-add-guest-users-portal>

**NEW QUESTION 158**

- (Exam Topic 5)

You have several Microsoft SharePoint document libraries in your on-premises environment. You have a Microsoft 365 tenant that has directory synchronization implemented.

You plan to move all the document libraries to SharePoint Online.

You need to recommend a migration strategy for the document libraries.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Actions**

Use the SharePoint Migration Tool to migrate the SharePoint data.

Create new SharePoint sites.

Run azcopy.exe to migrate the SharePoint data.

Create a Microsoft Azure Storage account.

Create new SharePoint libraries.

**Answer Area**

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

The SharePoint Migration Tool lets you migrate content to SharePoint Online and OneDrive from the following locations:

- > SharePoint Server 2013
- > SharePoint Server 2010
- > Network and local file shares

The first step is to create new SharePoint sites in SharePoint online. These sites will host the document libraries which will host the migrated content.

The second step is to create the document libraries in the SharePoint sites to host the migrated content. The final step is to use the SharePoint Migration Tool to migrate the content.

Reference:

<https://docs.microsoft.com/en-us/sharepointmigration/how-to-use-the-sharepoint-migration-tool>

**NEW QUESTION 161**

- (Exam Topic 5)

Your company has a Microsoft Azure Active Directory (Azure AD) tenant named contoso.onmicrosoft.com. You purchase a domain named contoso.com from a registrar and add all the required DNS records.

You create a user account named User1. User1 is configured to sign in as user1@contoso.onmicrosoft.com. You need to configure User1 to sign in as user1@contoso.com.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

**Actions**

Run Set-MsolDomainAuthentication - TenantID contoso.com

Modify the email address of User1.

Modify the username of User1.

Verify the custom domain.

Add a contoso.com as a SAN for an X.509 certificate.

Add a custom domain name.

**Answer Area**

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

The first step is to add the contoso.com domain to Office 365. You do this by adding a custom domain. When you add a custom domain to office 365, you can use the domain as your email address or to sign in to Office 365.

The second step is to verify the custom domain. This is to prove that you own the domain. You can verify the custom domain by adding a DNS record to the domain DNS zone.

When you have added and verified the domain, you can configure the user accounts to use it. To configure User1 to sign in as user1@contoso.com, you need to change the username of User1. In Office 365, the username is composed of two parts. The first part is the actual username (User1) and the second part is the domain. You need to modify the username of User1 by selecting the contoso.com domain from the dropdown list of domains. The dropdown list of domains contains the <domain>.onmicrosoft.com domain and any custom domains that have been added.

Reference:

<https://docs.microsoft.com/en-us/office365/admin/setup/add-domain?view=o365-worldwide>

**NEW QUESTION 166**

- (Exam Topic 5)

You have a Microsoft 365 subscription that contains several Microsoft SharePoint Online sites. You discover that users from your company can invite external users to access files on the SharePoint sites. You need to ensure that the company users can invite only authenticated guest users to the sites. What should you do?

- A. From the Microsoft 365 admin center, configure a partner relationship.
- B. From SharePoint Online Management Shell, run the set-SPOsite cmdlet.
- C. From the Azure Active Directory admin center, configure a conditional access policy.
- D. From the SharePoint admin center, configure the sharing settings.

**Answer:** D

**Explanation:**

You need to set the Sharing settings to 'Existing Guests'. This setting allows sharing only with guests who are already in your directory. These guests may exist in your directory because they previously accepted sharing invitations or because they were manually added.

Reference:

<https://docs.microsoft.com/en-us/sharepoint/turn-external-sharing-on-or-off>

**NEW QUESTION 171**

- (Exam Topic 5)

You have a Microsoft 365 E5 subscription that contains a group named Group 1.

You need to ensure that all the members of Group1 are notified when Microsoft 365 outages occur. The solution must minimize administrative effort. What should you do?

- A. From the Microsoft 365 admin center, configure a Service health email notification
- B. From the Exchange admin center, create an alert policy and configure an email notification.
- C. From the Microsoft 365 admin center, configure a Message center email notification.
- D. From the Microsoft 365 Defender portal create an alert policy and configure an email notification.

**Answer:** C

**NEW QUESTION 175**

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@M365x981607.onmicrosoft.com Microsoft 365 Password: \*yfLo7lr2&yIf the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

The following information is for technical support purposes only:

Lab Instance: 10811525

You plan to provide several users in your organization with the ability to join their Windows 10 device to Microsoft Azure Active Directory (Azure AD).

You need to ensure that all the users who join a device use multi-factor authentication.

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

You need to configure the device settings in Azure Active Directory.

\* 1. Go to the Azure Active Directory admin center.

- \* 2. Select Azure Active Directory.
- \* 3. Select Devices.
- \* 4. Select Device Settings.
- \* 5. Toggle the 'Require Multi-Factor Auth to join devices' setting to Yes.
- \* 6. Click Save to save the changes. References:  
<https://docs.microsoft.com/en-us/azure/active-directory/devices/device-management-azure-portal>

**NEW QUESTION 177**

- (Exam Topic 5)

You have a Microsoft 365 subscription and a hybrid Microsoft Exchange Online deployment.

You plan to deploy iOS devices that will use Outlook for iOS and Hybrid Modem Authentication (HMA). You need to ensure that HMA is configured correctly. What should you use?

- A. Microsoft Diagnostics and Recovery Toolset (DaRT)
- B. Microsoft Remote Connectivity Analyzer
- C. Microsoft Support and Recovery Assistant
- D. Apple Configurator

**Answer: D**

**NEW QUESTION 182**

- (Exam Topic 5)

You have a Microsoft 365 tenant that contains Microsoft Exchange Online.

You plan to enable calendar sharing with a partner organization named adatum.com. The partner organization also has a Microsoft 365 tenant.

You need to ensure that the calendar of every user is available to the users in adatum.com immediately. What should you do?

- A. From the Exchange admin center, create a sharing policy.
- B. From the Exchange admin center, create a new organization relationship
- C. From the Microsoft 365 admin center, modify the Organization profile settings.
- D. From the Microsoft 365 admin center, configure external site sharing.

**Answer: B**

**Explanation:**

You need to set up an organization relationship to share calendar information with an external business partner. Office 365 admins can set up an organization relationship with another Office 365 organization or with an Exchange on-premises organization.

Reference:

<https://docs.microsoft.com/en-us/exchange/sharing/organization-relationships/create-an-organization-relationshi>

**NEW QUESTION 186**

- (Exam Topic 5)

You are developing a Microsoft Teams tab that will capture coordinates from mobile devices and send notifications to users.

The relevant portion of the app manifest is shown in the App Manifest exhibit (Click the App Manifest tab.) The relevant portion of the JavaScript code for the tab is shown in the JavaScript exhibit (Click the JavaScript tab)

While testing the tab, a user receives the message shown in the Message exhibit (Click the Message tab.) For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE; Each correct selection is worth one point.

**Answer Area**

Statements	Yes	No
If the user changes mobile devices after successfully using all the functionalities in the tab, the user will receive the message again.	<input type="radio"/>	<input type="radio"/>
If the user uses two different tenants on the same mobile device, the user will receive the message again.	<input type="radio"/>	<input type="radio"/>
If two users share the same mobile device, each user will receive the message when the user first uses the tab.	<input type="radio"/>	<input type="radio"/>

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

Answer Area

Statements	Yes	No
If the user changes mobile devices after successfully using all the functionalities in the tab, the user will receive the message again.	<input checked="" type="radio"/>	<input type="radio"/>
If the user uses two different tenants on the same mobile device, the user will receive the message again.	<input type="radio"/>	<input checked="" type="radio"/>
If two users share the same mobile device, each user will receive the message when the user first uses the tab.	<input checked="" type="radio"/>	<input type="radio"/>

**NEW QUESTION 187**

- (Exam Topic 5)

You implement Microsoft Azure Advanced Threat Protection (Azure ATP). You have an Azure ATP sensor configured as shown in the following exhibit. Updates

**Updates**

Domain controller restart during updates  OFF

NAME	TYPE	VERSION	AUTOM...	DELAYE...	STATUS
LON-DC1	Sensor	2.48.5521	<input checked="" type="checkbox"/> on	<input checked="" type="checkbox"/> on	Up to date

Save

How long after the Azure ATP cloud service is updated will the sensor update?

- A. 1 hour
- B. 7 days
- C. 48 hours
- D. 12 hours
- E. 72 hours

**Answer: E**

**Explanation:**

References:

<https://docs.microsoft.com/en-us/azure-advanced-threat-protection/atp-whats-new> The exhibit shows that the sensor is configure for Delayed update.

Given the rapid speed of ongoing Azure ATP development and release updates, you may decide to define a subset group of your sensors as a delayed update ring, allowing for a gradual sensor update process. Azure

ATP enables you to choose how your sensors are updated and set each sensor as a Delayed update candidate.

Sensors not selected for delayed update are updated automatically, each time the Azure ATP service is updated. Sensors set to Delayed update each service update.

Reference:

are updated on a delay of 72 hours, following the official release of

<https://docs.microsoft.com/en-us/azure-advanced-threat-protection/sensor-update>

**NEW QUESTION 188**

- (Exam Topic 5)

You are configuring an enterprise application named TestApp in Microsoft Azure as shown in the following exhibit.

**Test Application**

Click here to verify application configuration.

**Basic Settings**

\* Internal Url ?

External Url ?

Pre Authentication ?

Connector Group ?

---

**Additional Settings**

Backend Application Timeout ?

Use HTTP-Only-Cookie ?

Translate URLs in ?

Headers ?

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.  
 NOTE: Each correct selection is worth one point.

To ensure that when users access TestApp, the proxy automatically scans for internal URLs published through the Application Proxy, set [answer choice].

▼

Use Http-Only Cookie to Yes

Translate URLs in Headers to No

Translate URLs in Application Body to Yes

To protect TestApp from Cross-Site Scripting (XSS), set [answer choice].

▼

Use Http-Only Cookie to Yes

Translate URLs in Headers to No

Translate URLs in Application Body to Yes

- A. Mastered
- B. Not Mastered

**Answer:** A

**Explanation:**

References:

<https://docs.microsoft.com/en-us/azure/active-directory/manage-apps/application-proxy-configure-hard-coded-li>

**NEW QUESTION 190**

- (Exam Topic 5)

Your company has a Microsoft Azure Active Directory (Azure AD) directory tenant named contoso.onmicrosoft.com. All users have client computers that run Windows 10 Pro and are joined to Azure AD. The company purchases a Microsoft 365 E3 subscription. You need to upgrade all the computers to Windows 10 Enterprise. The solution must minimize administrative effort. You assign licenses from the Microsoft 365 admin center. What should you do next?

- A. Add a custom domain name to the subscription.
- B. Deploy Windows 10 Enterprise by using Windows Autopilot.
- C. Create provisioning package, and then deploy the package to all the computers.
- D. Instruct all the users to log off of their computer, and then to log in again.

**Answer:** B

**Explanation:**

With Windows Autopilot the user can set up pre-configure devices without the need consult their IT administrator.

Reference:

<https://docs.microsoft.com/en-us/windows/deployment/windows-10-deployment-scenarios> <https://docs.microsoft.com/en-us/windows/deployment/windows-autopilot/windows-autopilot>

**NEW QUESTION 194**

- (Exam Topic 5)

You have an on-premises Microsoft Exchange Server organization that contains 100 mailboxes. You have a hybrid Microsoft 365 tenant. You run the Hybrid Configuration wizard and migrate the mailboxes to the tenant. You need to ensure that Microsoft 365 spam filtering is applied to incoming email. What should you do?

- A. Run the Hybrid Configuration wizard again.
- B. Update the Sender Policy Framework (SPF) TXT record to point to the on-premises Exchange IP address.
- C. Run the Azure Active Directory Connect wizard again.
- D. Update the MX record to point to Exchange Online.

**Answer: D**

**Explanation:**

Reference:

<https://docs.microsoft.com/en-us/exchange/mail-flow-best-practices/manage-mailboxes-using-microsoft-365-or>

**NEW QUESTION 198**

- (Exam Topic 5)

You are developing a single-page application (SPA) named App1 that will be used by the public. Many users of App1 restrict pop-up windows from opening in their browser.

You need to authenticate the users by using the Microsoft identity platform. The solution must meet the following requirements:

- Ensure that App1 can read the profile of a user.
- Minimize user interaction during authentication.
- Prevent App1 from requiring admin consent for any permissions.

How should you complete the code? To answer, select the appropriate options in the answer area.

**Answer Area**

```
function authCallback(error, response) {
}

userAgentApplication.handleRedirectCallback(authCallback);

const accessTokenRequest: AuthenticationParameters = {
  scopes: ["user.read"]
}

use
  scopes: ["user.read.all"]
  scopes: ["people.read"]
  scopes: ["people.read.all"]
}

let accessToken = acc
}).catch(function (error) {
  acquireTokenRedirect
  acquireTokenSilent
  acquireTokenPopup
}

userAgentApplication.
  acquireTokenRedirect
  acquireTokenSilent
  acquireTokenPopup
}

});
```

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

**Answer Area**

```

function authCallback(error, response) {
}

userAgentApplication.handleRedirectCallback(authCallback);

const accessTokenRequest: AuthenticationParameters = {
  scopes: ["user.read"]
};

use {
  scopes: ["user.read.all"]
  scopes: ["people.read"]
  scopes: ["people.read.all"]
}

let accessToken = acquireTokenRedirect(accessTokenRequest).then(function(accessTokenResponse) {
}).catch(function (error) {
  acquireTokenSilent(accessTokenRequest);
  acquireTokenPopup(accessTokenRequest);
});

userAgentApplication.
  acquireTokenRedirect(accessTokenRequest);
  acquireTokenSilent(accessTokenRequest);
  acquireTokenPopup(accessTokenRequest);
});

```

**NEW QUESTION 200**

- (Exam Topic 5)

You are building a Microsoft Office Add-in for Outlook that will use the Microsoft Graph REST API to retrieve a users documents from a Microsoft SharePoint Online site. What should the add-in provide to retrieve the documents on behalf of the user?

- A. a refresh token
- B. an identity token
- C. a single sign-on (SSO) token
- D. an access token

**Answer: D**

**NEW QUESTION 202**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has a Microsoft Office 365 tenant.

You suspect that several Office 365 features were recently updated.

You need to view a list of the features that were recently updated in the tenant. Solution: You use Dashboard in Security & Compliance.

Does this meet the goal?

- A. Yes
- B. NO

**Answer: B**

**Explanation:**

Depending on what your organization's Office 365 subscription includes, the Dashboard in Security & Compliance includes several widgets, such as Threat Management Summary, Threat Protection Status, Global Weekly Threat Detections, Malware, etc. It does not display a list of the features that were recently updated in the tenant so this solution does not meet the goal.

To meet the goal, you need to use Message center in the Microsoft 365 admin center.

Reference:

<https://docs.microsoft.com/en-us/microsoft-365/security/office-365-security/security-dashboard> <https://docs.microsoft.com/en-us/office365/admin/manage/message-center?view=o365-worldwide>

**NEW QUESTION 204**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your company has a Microsoft Office 365 tenant.

You suspect that several Office 365 features were recently updated.

You need to view a list of the features that were recently updated in the tenant. Solution: You use the Service health option in the Microsoft 365 admin center.

Does this meet the goal?

- A. Yes
- B. No

**Answer:** B

**Explanation:**

Reference:  
<https://docs.microsoft.com/en-us/microsoft-365/enterprise/view-service-health?view=o365-worldwide>

**NEW QUESTION 208**

- (Exam Topic 5)

You have a hybrid deployment of Microsoft 365 and an Azure Active Directory (Azure AD) tenant. The tenant contains the users shown in the following table.

Name	Type	Source
User1	Member	Azure AD
User2	Member	Windows Server Active Directory
User3	Guest	Microsoft account

Password protection in Azure AD is configured as shown in the following exhibit.

**Custom smart lockout**

Lockout threshold ⓘ  ✓

Lockout duration in seconds ⓘ  ✓

**Custom banned passwords**

Enforce custom list ⓘ  Yes  No

Custom banned password list ⓘ  ✓

**Password protection for Windows Server Active Directory**

Enable password protection on Windows Server Active Directory ⓘ  Yes  No

Mode ⓘ  Enforced  Audit

Which users will be prevented from using the word "Contoso" as part of their password?

- A. User1 only
- B. User1 and User2 only
- C. User1 and User3 only
- D. User1, User2, and User3

**Answer:** D

**Explanation:**

Reference:  
<https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-password-ban-bad>

**NEW QUESTION 213**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an on-premises Active Directory domain named contoso.com. The domain contains the users shown in the following table.

Name	UPN suffix
User1	Contoso.com
User2	Fabrikam.com

The domain syncs to an Azure Active Directory (Azure AD) tenant named contoso.com as shown in the exhibit. (Click the Exhibit tab.)

## PROVISION FROM ACTIVE DIRECTORY

### Azure AD Connect cloud provisioning

This feature allows you to manage provisioning from the cloud.

[Manage provisioning \(Preview\)](#)

### Azure AD Connect sync

Sync Status	Enabled
Last Sync	Less than 1 hour ago
Password Hash Sync	Enabled

## USER SIGN-IN

Federation	Disabled	0 domains
Seamless single sign-on	Enabled	1 domain
Pass-through authentication	Enabled	2 agents

User2 fails to authenticate to Azure AD when signing in as user2@fabrikam.com. You need to ensure that User2 can access the resources in Azure AD. Solution: From the on-premises Active Directory domain, you set the UPN suffix for User2 to @contoso.com. You instruct User2 to sign in as user2@contoso.com. Does this meet the goal?

- A. Yes
- B. No

**Answer:** A

**Explanation:**

The on-premises Active Directory domain is named contoso.com. You can enable users to sign on using a different UPN (different domain), by adding the domain to Microsoft 365 as a custom domain. Alternatively, you can configure the user account to use the existing domain (contoso.com).

**NEW QUESTION 216**

- (Exam Topic 5)

Your on-premises network contains five file servers. The file servers host shares that contain user data. You plan to migrate the user data to a Microsoft 365 subscription.

You need to recommend a solution to import the user data into Microsoft OneDrive. What should you include in the recommendation?

- A. Configure the Migrate of the OneDrive client on your Windows 10 device
- B. Configure the Sync settings in the OneDrive admin center.
- C. Run the SharePoint Hybrid Configuration Wizard.
- D. Run the SharePoint Migration Tool.

**Answer:** D

**Explanation:**

The SharePoint Migration Tool lets you migrate content to SharePoint Online and OneDrive from the following locations:

- > SharePoint Server 2013
- > SharePoint Server 2010
- > Network and local file shares Reference:

<https://docs.microsoft.com/en-us/sharepointmigration/introducing-the-sharepoint-migration-tool>

**NEW QUESTION 221**

- (Exam Topic 5)

Your company has a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com that includes the users shown in the following table.

Name	Usage location	Membership
User1	United States	Group1, Group2
User2	<i>Not applicable</i>	Group2
User3	<i>Not applicable</i>	Group1
User4	Canada	Group1

Group2 is a member of Group1.

You assign a Microsoft Office 365 Enterprise E3 license to Group1. You need to identify how many Office 365 E3 licenses are assigned. What should you identify?

- A. 1

- B. 2
- C. 3
- D. 4

**Answer: C**

**Explanation:**

Group-based licensing currently does not support groups that contain other groups (nested groups). If you apply a license to a nested group, only the immediate first-level user members of the group have the licenses applied. Therefore, User2 will not be assigned a license.

When Azure AD assigns group licenses, any users without a specified usage location inherit the location of the directory. Therefore, User3 will be assigned a license and his usage location will be set to the location of the directory.

Reference:

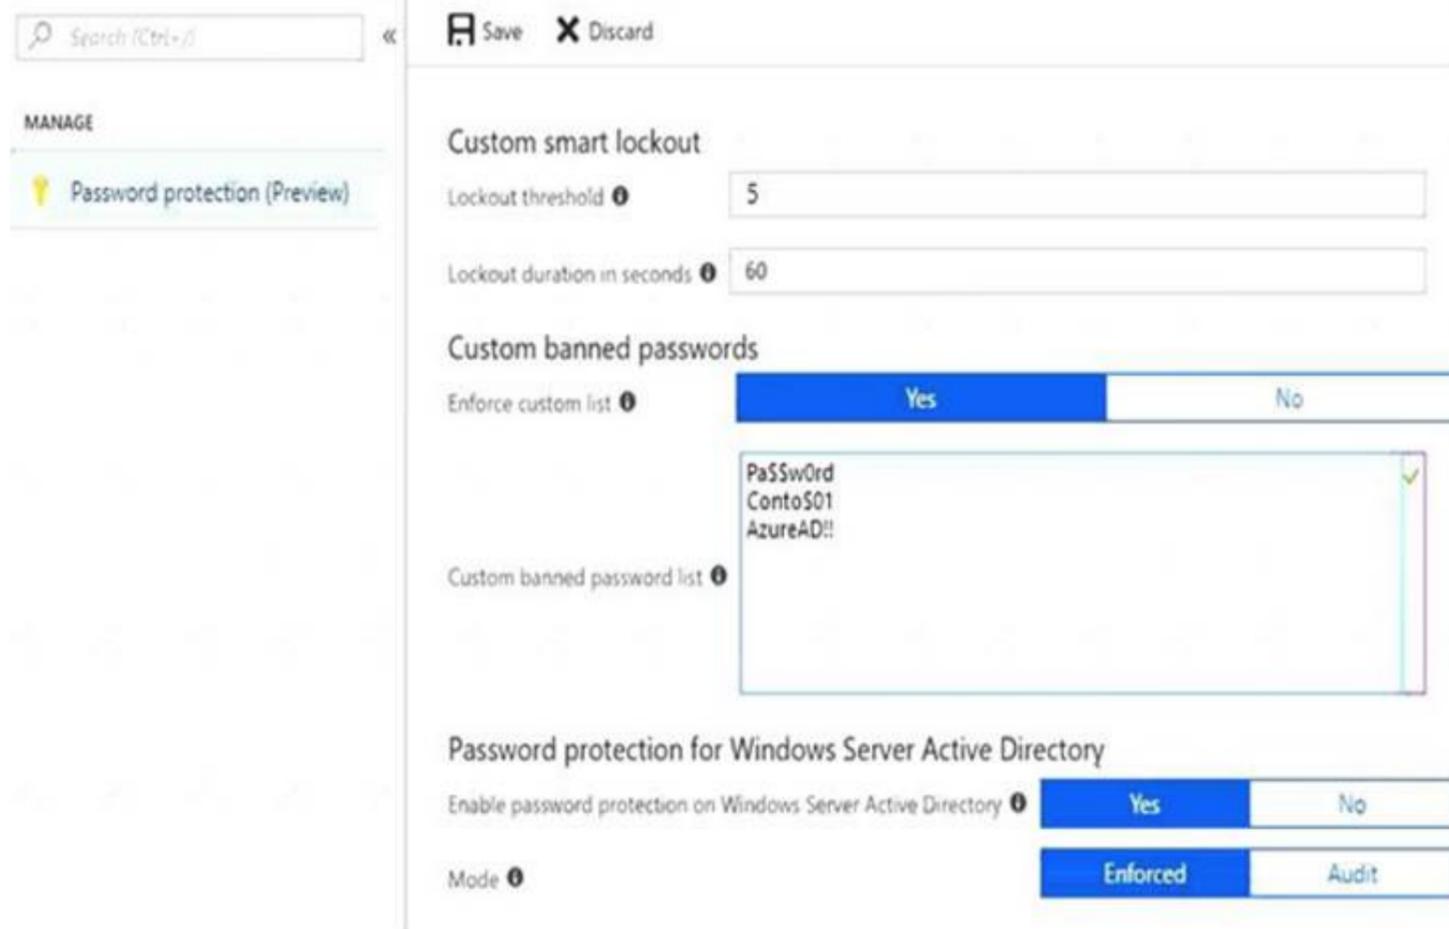

<https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/licensing-groups-assign> <https://docs.microsoft.com/en-us/azure/active-directory/users-groups-roles/licensing-group-advanced>

**NEW QUESTION 225**

- (Exam Topic 5)

You have a Microsoft 365 Enterprise subscription.

You create a password policy as shown in the following exhibit.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the graphic.  
 NOTE: Each correct selection is worth one point.

If users are locked out of their account, they have [answer choice].

- five sign-in attempts each subsequent minute
- one sign-in attempt each subsequent minute
- five sign-in attempts every five minutes
- one sign-in attempt every five minutes

Users can create a password of [answer choice].

- Password11
- Conto\$01Pa\$\$word
- AzureAD!!111
- pa\$\$w0rd

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

By default, smart lockout locks the account from sign-in attempts for one minute after 10 failed attempts. In this question, the lockout threshold is 5 failed attempts. The account locks again after each subsequent failed sign-in attempt, for one minute at first and longer in subsequent attempts.

Password evaluation goes through several steps including normalization and Substring matching which is used on the normalized password to check for the user's first and last name as well as the tenant name.

The next step is to identify all instances of banned passwords in the user's normalized new password. Then: ➤ Each banned password that is found in a user's password is given one point.

➤ Each remaining unique character is given one point.

➤ A password must be at least five (5) points for it to be accepted.

Conto\$01Pa\$\$word contains two banned passwords and no remaining unique characters so is given a score of 2 points. This is less than the required 5 points so

will be rejected.

Pa\$\$w0rd contains a banned password and no remaining unique characters so is given a score of 1 point. This is less than the required 5 points so will be rejected.

AzureAD!!111 contains a banned password (AzureAD!!) and has three remaining characters. However, the remaining characters are all the same (they're all 1s) so that is only one unique character. So that password will be given a score of 2. One for the banned password and 1 for the unique character. This is less than the required 5 points so will be rejected.

Password11 does not contain a banned password. Password11 contains 10 characters. However, there are two 's' and two '1' so there are 8 unique characters. Therefore, the password will be given a score of 8 points. This is more than the required 5 points so the password will be accepted.

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/authentication/concept-password-ban-bad> <https://docs.microsoft.com/en-us/azure/active-directory/authentication/howto-password-smart-lockout>

#### **NEW QUESTION 230**

- (Exam Topic 5)

You have a single-page application (SPA) named TodoListSPA and a server-based web app named TodoUstServKe.

The permissions for the TodoListSPA API are configured as shown in the TodoUstSPA exhibit (Click the TodoUstSPA tab)

The permissions for the TodoUstService API are configured as shown in the TodoListService exhibit (Click the TodoUstService tab.)

You need to ensure that TodoUstService can access a Microsoft OneDrive file of the signed-in user. The solution must use the principle of least privilege. Which permission request should you configure?

- A. the sites.Read.All application permission for TodoUstService
- B. the sites.Read.All application permission for TodoUstSPA
- C. the sites.Read.All delegated permission for TodoUstService
- D. the sites.Read.All delegated permission for TodoListSPA

**Answer: C**

#### **NEW QUESTION 233**

- (Exam Topic 5)

You are developing a Microsoft Teams app that will use an Azure function to send scheduled messages from a bot to users. What is required for the Teams app to send a proactive message to the users?

- A. The users must send at least one message to the bot.
- B. The bot must be approved in Azure Active Directory (Azure AD).
- C. The bot must be granted admin access to the users.
- D. The Teams app must be added for each user.

**Answer: A**

#### **NEW QUESTION 238**

- (Exam Topic 5)

Your on-premises network contains a Microsoft Exchange Server 2019 organization. You purchase a Microsoft 365 E5 subscription. You need to integrate the on-premises network and Exchange Online. What should you do first?

- A. implement Azure AD Connect.
- B. Add a connector in Exchange Online.
- C. Run the Hybrid Configuration wizard
- D. install an Azure Active Directory (Azure AD) Application Proxy connector.

**Answer: A**

#### **NEW QUESTION 243**

- (Exam Topic 5)

You have an on-premises call center and a Microsoft 365 E5 tenant.

You plan to implement Microsoft Phone System Direct Routing and Microsoft Teams. What should you include in the solution?

- A. a local number port order request
- B. Skype for Business Cloud Connector Edition
- C. Azure AD Connect
- D. a Session Border Controller (SBC)

**Answer: D**

#### **NEW QUESTION 245**

- (Exam Topic 5)

You have a Microsoft 365 subscription that contains a Microsoft Azure Active Directory (Azure AD) tenant named contoso.com. The tenant includes a user named User1. You enable Azure AD Identity Protection.

You need to ensure that User1 can review the list in Azure AD Identity Protection of users flagged for risk. The solution must use the principle of least privilege. To which role should you add User1?

- A. Security reader
- B. User administrator
- C. Service administrator
- D. Reports reader

**Answer: A**

**Explanation:**

Either one of the following three roles can review the list in Azure AD Identity Protection of users flagged for risk:

- > Security Administrator
- > Global Administrator
- > Security Reader

**NEW QUESTION 246**

- (Exam Topic 5)

Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

You have a Microsoft 365 subscription.

You need to prevent users from accessing your Microsoft SharePoint Online sites unless the users are connected to your on-premises network.

Solution: From the Device Management admin center, you a trusted location and compliance policy. Does this meet the goal?

- A. Yes
- B. No

**Answer: B**

**Explanation:**

Conditional Access in SharePoint Online can be configured to use an IP Address white list to allow access. References:

**NEW QUESTION 248**

- (Exam Topic 5)

Please wait while the virtual machine loads. Once loaded, you may proceed to the lab section. This may take a few minutes, and the wait time will not be deducted from your overall test time.

When the Next button is available, click it to access the lab section. In this section, you will perform a set of tasks in a live environment. While most functionality will be available to you as it would be in a live environment, some functionality (e.g., copy and paste, ability to navigate to external websites) will not be possible by design.

Scoring is based on the outcome of performing the tasks stated in the lab. In other words, it doesn't matter how you accomplish the task, if you successfully perform it, you will earn credit for that task.

Labs are not timed separately, and this exam may have more than one lab that you must complete. You can use as much time as you would like to complete each lab. But, you should manage your time appropriately to ensure that you are able to complete the lab(s) and all other sections of the exam in the time provided.

Please note that once you submit your work by clicking the Next button within a lab, you will NOT be able to return to the lab.

You may now click next to proceed to the lab. Lab information

Use the following login credentials as needed:

To enter your username, place your cursor in the Sign in box and click on the username below.

To enter your password, place your cursor in the Enter password box and click on the password below.

Microsoft 365 Username: admin@LODSe426243.onmicrosoft.com Microsoft 365 Password: 3&YWYjse-6-d

If the Microsoft 365 portal does not load successfully in the browser, press CTRL-K to reload the portal in a new browser tab.

You need to create a group named Group2. Users who are added to Group2 must be licensed automatically for Microsoft Offline 365.

- A. Mastered
- B. Not Mastered

**Answer: A**

**Explanation:**

You need to create the group and assign a license to the group. Anyone who is added to the group will automatically be assigned the license that is assigned to the group.

- \* 1. Go to the Azure Active Directory admin center.
- \* 2. Select the Azure Active Directory link then select Groups.
- \* 3. Click the New Group link.
- \* 4. Select 'Security' as the group type and enter 'Group2' for the group name.
- \* 5. Click the Create button to create the group.
- \* 6. Back in the Groups list, select Group2 to open the properties page for the group.
- \* 7. Select 'Licenses'.
- \* 8. Select the '+ Assignments' link.
- \* 9. Tick the box to select the license.
- \* 10. Click the Save button to save the changes. References:
