NEW QUESTION 3
- (Exam Topic 1)
You need to complete the MSAL.js code for SSO. Which code segment should you insert at line 06?

A. storeAuthStateInCookie: false
B. storeAuthStateInCookie: true
C. cacheLocation: 'localStorage'
D. cacheLocation: 'sessionStorage'

Answer: C

Explanation:
Scenario: Implement single sign-on (SSO) and minimize login prompts across browser tabs.
When your application is open in multiple tabs and you first sign in the user on one tab, the user is also signed in on the other tabs without being prompted.
MSAL.js caches the ID token for the user in the browser localStorage and will sign the user in to the application on the other open tabs.
By default, MSAL.js uses sessionStorage which does not allow the session to be shared between tabs. To get SSO between tabs, make sure to set the cacheLocation in MSAL.js to localStorage.

You are developing a new application named App1 that uses the Microsoft identity platform to authenticate to Azure Active Directory (Azure AD).
Currently, App1 can read user profile information. You need to allow App1 to read the user's calendar.
Solution: From the Azure portal, add the Microsoft Graph API and the Calendar.Read permission by using the API permission list of App1. Grant tenant admin consent.
Does this meet the goal?

A. Yes
B. No

Answer: A

Explanation:
Microsoft Graph Calendars.Read allows the app to read events in user calendars.
For your app to access data in Microsoft Graph, the user or administrator must grant it the correct permissions via a consent process.

Application permissions are used by apps that run without a signed-in user present; for example, apps that run as background services or daemons. Application permissions can only be consented by an administrator.

NEW QUESTION 58
- (Exam Topic 2)
You are building email notifications for an expensing system.
When a user receives an email notification, the email will contain a comment field. When the user submits a comment, the data will be returned to the expensing system for processing.
What should you do to implement the notification by using the minimum amount of development effort?

A. Create a Microsoft Office Add-in that has an action pane to display the notifications
B. Leverage Microsoft Graph notifications
C. Leverage the Azure SignalR Service and implement web notifications
D. Configure the expensing system to send actionable messages

Answer: D

Explanation:
Whether you are filling out a survey, approving an expense report, or updating a CRM sales opportunity, Actionable Messages enable you to take quick actions right from within Outlook. Developers can now embed actions in their emails or notifications, elevating user engagement with their services and increasing organizational productivity.
Office 365 provides two solutions to enhance productivity with Outlook Actionable Messages: actionable messages via email, and actionable messages via Office 365 Connectors.

NEW QUESTION 61
- (Exam Topic 2)
You develop a web API named WebApi1.
When validating a token received from a client application, WebApi1 receives a MsalUiRequiredException exception from Azure Active Directory (Azure AD).
You need to formulate the response that WebApi1 will return to the client application. Which HTTP response should you send?

A. HTTP 307 Temporary Redirect
B. HTTP 400 Bad Request
C. HTTP 403 Forbidden
D. HTTP 412 Precondition Failed

Answer: D

Explanation:

The HyperText Transfer Protocol (HTTP) 412 Precondition Failed client error response code indicates that access to the target resource has been denied. This happens with conditional requests on methods other than GET or HEAD when the condition defined by the If-Unmodified-Since or If-None-Match headers is not fulfilled. In that case, the request, usually an upload or a modification of a resource, cannot be made and this error response is sent back.

MsalUiRequiredException

The "Ui Required" is proposed as a specialization of MsalServiceException named MsalUiRequiredException. This means you have attempted to use a non-interactive method of acquiring a token (e.g. AcquireTokenSilent), but MSAL could not do it silently. this can be because:

- you need to sign-in
- you need to consent
- you need to go through a multi-factor authentication experience.

The remediation is to call AcquireTokenInteractive try

```
{
app.AcquireTokenXXX(scopes, account) WithYYYY(...)
ExecuteAsync()
}
catch(MsalUiRequiredException ex)
{
app.AcquireTokenInteractive(scopes) WithAccount(account)
WithClaims(ex.Claims) ExcecuteAsync();
}
```
